Technology Strategy And National Security:

Technology, Strategy and National Security Franklin D. Margiotta, Ralph Sanders, 2003 **National Security Science and Technology Strategy**, 1995 In March 1995 President Clinton ordered a sweeping reexamination of the United States Government's approach to putting science and technology to the service of national security and global stability in light of the changed security environment increasing global economic competition and growing budgetary pressures This National Security Science and Technology Strategy the product of that reexamination is the country's first comprehensive Presidential statement of national security science and technology priorities It augments the President's National Security Strategy of Engagement and Enlargement by articulating science and technology policies and initiatives that support the President's three primary national security objectives enhancing our military readiness and capabilities preventing conflict from occurring through engagement with other nations and promoting prosperity at home It advances that document's central approach of preventing conflict and maintaining the capability to respond should conflict occur It is built on the recognition that our security depends on economic strength as well as military power And it is grounded in the conviction that investment in science and technology is central to our ability to meet the challenges ahead This National Security Science and Technology Strategy defines our new approaches to applying science and technology to the challenges that most directly affect our nation's security *Technology, Strategy and National Security* Franklin D. national security strategy for years to come Part of the discussion observes the past present and future of technology innovation within global governments including the sharing of data artificial intelligence AI military policy defense strategies and more For instance globalization of science and technology emerging and unpredictable threats both manmade and natural conventional and emerging weapons of mass destruction and an inversion of technology flow from the private to public sectors all present challenges to our national security Many countries are now dramatically increasing their investments in science technology and commercialization particularly in Asia and including many nontraditional players such as Vietnam and Singapore From a grand strategic perspective one might observe that in the decades to come in a world dominated by pervasive advanced technologies the countries that are most able to create acquire and utilize these disruptive technologies will lead the world This technological capacity will be one of if not the most important global resources Technological capacity will become the new oil Other topical related products can be found here Armed Robotics Emergence Weapons Systems Life Cycles Analysis and New Strategic Realities Enhancing Identity Development at Senior Services Colleges Military Communications A Test for Technology Closer Than You Think The Implications of the Third Offset Strategy for the U S Army

Aerospace Strategic Trade Philip K. Lawrence,Derek Braddon,2017-03-02 The U S economy is generally considered to run on free market or laissez faire principles implying that U S policy makers do not provide

government support for industrial or commercial sectors While mostly true it is not the case with strategic industries such as aerospace Support for the aerospace sector has been viewed as essential because aerospace technologies have been the material backbone of U S security systems But American historic dominance in commercial aerospace and particularly the large commercial aircraft sector arose on the back of defence technology paid for by the US government Aerospace Strategic Trade analyses the subsidy of the U S large commercial aircraft LCA industry and redefines the terms of the Airbus Boeing subsidy debate This is achieved by tracking the benefits to Boeing of the Research and Technology contracts granted by the DoD and NASA The book is characterized by a new level of methodological precision in the database upon which the factual claims rest and the analysis derives from an exhaustive search of U S public databases and also data on federal R D contracts obtained under the Freedom of Information Act FOIA in the USA The overall analysis brings together these two approaches and provides a balanced and highly informative account of U S federal funding of the American large commercial aircraft sector This book is of interest to academics industrialists and government officials concerned with the aerospace industry to managers and executives in the aerospace industry
