Bakis,2018-12-17 Published in 1997 Developments in information technology and telecommunications are giving new meaning to the concepts of space and time In particular the concepts of local and global are starting to merge together even though they apparently represent entirely different scales One example is telework also known as telecommuting Another is the rapid growth of outsourcing These developments are based on new technologies such as multimedia rapid improvements in storage technologies and the information superhighway including the Internet The structure of the world s telecommunications industry is changing and in addition political and social autonomy is breaking down The role of the nation state is challenged as are the old avenues and levers of political power Nation states have attempted to grab functional control over the emerging infrastructure but they are ultimately unable to exert control over the flood of information surging around the world There still remains a strong middle ground between local and global dominated by multinational corporations and governments

Handbook on the Geographies of Innovation Richard Shearmur, Christophe Carrincazeaux, David Doloreux, 2016-11-25 The geography of innovation is changing Firstly it is increasingly understood that innovative firms and organizations exhibit a wide variety of strategies each differently attuned to diverse geographic contexts Secondly and concomitantly the idea that cities clusters and physical proximity are essential for innovation is evolving under the weight of new theorizing and empirical evidence The aim of this handbook is to break with the many ideas and concepts that emerged during the course of the 1980s and 1990s and to fully take into account the new reality of the internet mobile communication technologies personal mobility and globalization The handbook gathers a new generation of ideas and authors to contribute to the debate providing an empirically grounded critical appraisal of the prevailing knowledge on the geography of innovation The 28 original chapters written by a diverse range of scholars with widely differing views present fresh empirical evidence and new perspectives relating to how innovation plays out across space in an age where mobility has increased information is ubiquitous and globalisation has been realised Overall the dialogue between existing theory and new possibilities provides a unique and challenging appraisal of the connection between innovation agglomeration and space Offering cutting edge ideas in an accessible format this will be an ideal resource for students and scholars of economic geography and innovation studies The empirical evidence and analysis will also be of great value for policymakers and government officials Contributors include B T Asheim H W Aslesen A Bain P A Balland N Bradford A Bramwell C Brennan Horley S Breschi C Carraincazeaux C Chaminade R Comunian C De Fuentes D Doloreux D Eckert A Faggian M Ferru R D Fitjar K Flanagan C Gibson M Grillitsch M Grossetti G Harirchi F Huber A Isaksen S Jewel J Karlsen N Komninos J L Klein N Lee F Lissoni M Maisonobe J Mattes P McCann C T Noumedem R Ortega Argil s M Plechero A Rallet A Rodriguez Pose R Shearmur H L Smith B Spigel J Tallec E Tranos D G Tremblay F T dtling M Trippel E Uyarra C Yang C Wilkie D A Wolfe
