

→ LES TÉLÉCOMMUNICATIONS PAR SATELLITE

Pilier de la société moderne, les télécommunications à l'échelle du globe constituent un secteur essentiel au plan commercial. Les satellites occupent une place fondamentale dans les réseaux de communication mondiaux, fournissant avec efficacité toutes sortes de services, sans interruption, dans quasiment toutes les régions de notre planète.

En favorisant les travaux de recherche et développement pour faire progresser une vaste gamme de nouvelles technologies et de concepts de systèmes innovants, l'ESA soutient la compétitivité de l'industrie européenne en matière de développement et d'exploitation de nouveaux produits et services, et de marchés émergents.

L'ESA contribue au déploiement de nouveaux satellites et programmes comme le satellite Alphasat, la plate-forme Alphabus, prochaine génération de grandes plates-formes dédiées

aux satellites de télécommunications haute puissance, SmallGeo, petite plate-forme géostationnaire, ou encore Hylas, un satellite de télécommunications conçu pour les services large bande.

EDRS est un système européen indépendant de satellites de relais de données en orbite géostationnaire utilisé pour la transmission de grandes quantités de données de satellites en orbite terrestre basse ou d'autres véhicules spatiaux vers le sol. IRIS est, pour sa part, un nouveau système de communications air-sol pour la gestion du trafic aérien.

L'ESA travaille en outre sur des projets, dans les domaines des télécommunications et des applications intégrées, qui offriront des solutions spatiales en réponse à des besoins variés et à des défis auxquels les citoyens européens et la société tout entière sont confrontés.
