**Travels of Learning** Ana Simões,A. Carneiro,M.P. Diogo,2013-04-17 The idea behind this book grew out of a research project launched by the international group STEP Science and Technology in the European Peripheries established in 1999 by historians of science from Spain Portugal Belgium Greece Turkey Italy Russia Sweden and Denmark The aim has been to re examine the historical and we might also add the geographical character of science and technology and their institutions in regions and societies within Europe usually outside mainstream historical analysis The intended activities of the group have been framed by the following issues reconsidering the centre periphery model which has been the dominant model in studies on the transfer of scientific knowledge bringing to the fore the concept of scientific appropriation and attempting to study the construction of various local discourses systematically examining the relationship between science politics and the rhetoric of modernisation in societies in the European periphery joining forces to find out more about scientific travels using networks to further understand the dynamics and role of scholars on societies in the periphery of Europe intensifying efforts to catalogue and make available to the international community the archival material in the peripheral countries <http://www.ccuoa.gr/step> on page 2 As a result of these programmatic guidelines a meeting was held in Lisbon in September 2000 in which the topic of scientific travels was used as a particularly good unifying theme on which to base a discussion of case studies involving the European peripheries

**Geographies of Science** Peter Meusburger,David Livingstone,Heike Jöns,2010-06-14 This collection of essays aims to further the understanding of historical and contemporary geographies of science It offers a fresh perspective on comparative approaches to scientific knowledge and practice as pursued by geographers sociologists anthropologists and historians of science The authors explore the formation and changing geographies of scientific centers from the sixteenth to the twentieth centuries and critically discuss the designing of knowledge spaces in early museums in modern laboratories at world fairs and in the periphery of contemporary science They also analyze the interactions between science and the public in Victorian Britain interwar Germany and recent environmental policy debates The book provides a genuine geographical perspective on the production and dissemination of knowledge and will thus be an important point of reference for those interested in the spatial relations of science and associated fields The Klaus Tschira Foundation supports diverse symposia the essence of which is published in this Springer series [www.kts.villa-bosch.de](http://www.kts.villa-bosch.de)

**Placing the Enlightenment** Charles W. J. Withers,2008-09-15 The Enlightenment was the age in which the world became modern challenging tradition in favor of reason freedom and critical inquiry While many aspects of the Enlightenment have been rigorously scrutinized its origins and motivations its principal characters and defining features its legacy and modern relevance the geographical dimensions of the era have until now largely been ignored Placing the Enlightenment contends that the Age of Reason was not only a period of pioneering geographical

investigation but also an age with spatial dimensions to its content and concerns Investigating the role space and location played in the creation and reception of Enlightenment ideas Charles W J Withers draws from the fields of art science history geography politics and religion to explore the legacies of Enlightenment national identity navigation discovery and knowledge Ultimately geography is revealed to be the source of much of the raw material from which philosophers fashioned theories of the human condition Lavishly illustrated and engagingly written Placing the Enlightenment will interest Enlightenment specialists from across the disciplines as well as any scholar curious about the role geography has played in the making of the modern world
