Treatment Of Pain:

Acupuncture in the Treatment of Pain - E-BOOK Marcus Backer, Michael G. Hammes, 2016-06-07 Acupuncture in the Treatment of Pain is aimed at both beginners and experienced practitioners who are treating patients with painful conditions. It provides an integrative approach using conventional and traditional Chinese Medicine in the treatment of pain with acupuncture. It is especially suited for conventionally western trained physicians who are interested in complementary approaches and seek a guideline to judge the potentials and limits of acupuncture in the treatment of pain. The book consists of two parts. The first part, chapter 2-8, gives the background for both traditional Chinese concepts to pathogenesis, diagnosis, and treatment of pain and basics of the conventional western approach to pain treatment. The second part, chapter 9-17, gives detailed information for the integrative treatment of all common painful conditions. For every single indication, conventional and traditional Chinese treatment options, including Chinese phytotherapy, are shown, and the value of acupuncture, scientific data about its efficacy, and its possible mode of action in western physiological terms are discussed. For all readers, this book offers a modern integrative approach which is based on scientific data and the clinical experience of the authors that Western and Traditional Chinese medicine complement each other and can create synergistic effects. This title is directed primarily towards health care professionals outside of the United States. It deals specifically with the management of potentially chronic pain, how to assess patients with pain, the factors involved in the development of chronic pain, and the setting up and running of a pain management programme. The main focus is on musculoskeletal and fibromyalgic type pain. Cancer pain is not addressed. The authors address not only what is recommended in the management of pain, but also whether and why it is done, thereby covering not only the content of interdisciplinary pain management, but also the processes involved. Provides extensive background material and covers broad issues which other books lack. Focuses on not only what is done with the management of pain, but whether and why it is done. Includes the nuts and bolts of setting up and running a pain management programme. Addresses the application of pain management programmes in a wide range of fields. Has a multidisciplinary approach and therefore appeals to a multidisciplinary market. Two new co-authors, Kay Greasley and Bengt Sjolund. Major restructuring of chapters and rewriting of content with new authors for many of them. Greatly increased discussion of biopsychosocial management in individual clinical practice. Addresses the needs of the individual practitioners as well as those working in specialised pain management units. Includes more on primary care and secondary pain prevention. Expanded discussion of the clinical/occupational interfaces. Particular emphasis on the identification and targeting of modifiable risk factors for chronic pain and prolonged disability. The following topics strengthened throughout: communication, the nature of groups, medication, and iatrogenics. Potential of an evidence-based biopsychosocial approach to pain management highlighted.
