Urban Forest The City of Worcester MA serves as the focal point for this evolving story of grassroots negligence and activism The author is adept at uncovering the societal and industrial forces that carved a city out of the wilderness and sometimes molded a little of the wilderness back into the city An ambitious work the book is a 200 page treasure with 16 pages of color photos and numerous illustrations throughout Nature lovers will also appreciate the occasional botanical information and illustrations of native trees Trees At Risk is both a hopeful blueprint and a cautionary tale of what cities can do to protect and promote their urban forests and what can happen if they do not Ms Herwitz is a skilled historian but also a masterful wordsmith For example On a chill December afternoon when the hardwoods stand barren their fallen leaves but sodden dregs of autumn s gold Worcester s hues are clay and stone Viewed from Mount St James once home to native Nipmucs now to the College of the Holy Cross the muted city melds with the dun colored woodlands of surrounding hills its red brick factory buildings and cement offices crowding the valley floor a glass and steel bank tower mirroring winter s slate sky white and frown and beige three deckers climbing rocky hillsides the charcoal gray swath of I 290snaking over streets Come spring though there is green First a fine misting of chartreuse as the weeping willows unfurl their buds then a wash of emerald as the sugar and Norway maples the ashes oaks and ginkgoes spread their leaves until Worcester s swarthy face is softened by a sylvan veil A city of aging factories and dreams of renewal of ethnic pride and paternalism of grit ingenuity and determination Worcester is also a city of trees Her work reaches far beyond Worcester though in its lessons and implications She looks at the national picture of demising urban forests Statistics abound the average life of a city tree is only 32 years 13 if planted downtown far short of the 150 year average life span of trees in rural settings What s more city tree planting and maintenance budgets have been slashed nationwide and urban parks are also at risk The story of the threat to Worcester s trees is the story of the relationship between Americans and nature at times exploitative at times romantic and occasionally reverent She gives a clear history of the local native landscape and its gradual civilization And throughout the work she provides wonderful snippets of historical significance like the quote from Genesis that English settlers liked to use to justify their taking of Native land Be fruitful and multiply and replenish the earth and subdue it But the settlers proved far more accomplished at subduing than replenishing as have their offspring even to this day The sad history of the wasting of trees deforestation and industrial transformation are detailed as are early conservation efforts in the mid eighteenth century and the first use of public funds for tree planting a century later She follows the trend of the romantic ideal of pastoral land in rural cemetery design through to the Greening of Worcester in 1885 with the planting of 500 trees by the Worcester Grange The book traces the urban parks movement and the inevitable growing demand for green space as the city expanded Then it chronicles the turn of the century and the theme of Wilderness Squandered As the Worcester case study continues Ms Herwitz examined politics the railroad the Hurricane of 38 the Great Depression ethnic politics and public parks the Chestnut Blight and Dutch Elm Disease As the 20th century gathered momentum the early precursors to land use controls

and planned communities are seen and followed up to current times As budget cuts and benign neglect took hold a legacy was being squandered and the trend was national A 1991 survey of urban tree care programs in 20 major American cities by the national conservation group American Forests revealed that nearly three fourths of those communities had cut back funding for street trees despite the fact that they had collectively planted only about one tree for every four needed just to maintain their current tree census Thus the powerful story of an urban forest lost and found again and again teaches us to open our eyes in our own hometowns The author then calls us to action using global numbers that we have almost grown numb to In the past 50 years global deforestation and exponential acceleration of fossil fuel consumption and methane gas production have raised the amount of carbon dioxide in the atmosphere to about 25 to 30 % above levels that have prevailed for the past 160 000 years and could double by the 21st century The arctic ice cap has thinned by 42% The world's coral reefs have thinned by 27% Rainforests could disappear in 25 30 years Air pollution acid rain It all adds up or maybe we should say it all subtracts down down down But she also provides us with hope She points to good stewardship in Milwaukee and other positive examples around the country And she discusses modern economic forces that are driven by the pressure of population growth and basic human nature These economic forces are then seen as possible sources of support for the future of our urban forests Our suggestion is that our cities do in fact have the economic and technological resources to grow magnificent urban forests but they lack the political will Further we would say that political will rooted in the minds and hearts of the public can be won through education There is an old Chinese proverb Think one year ahead plant rice think ten years ahead plant trees think one hundred years ahead educate people And we would finally suggest that North America's 1200 nature centers are good places to look to Nature centers teach environmental values and are vital members of their communities While school districts may be slow to advocate for social action or conservation nature centers are busily doing just that The education of all citizens not just the young and not yet enfranchised but the adults the property owners the industrial leaders and our civic representatives all need education However sending them facts and figures and even sending them this wonderful book will probably not do the trick They spend the vast majority of their lives indoors They need contact with nature If you want to educate someone about the value of trees take them to an arboretum or a nature center or a fabulous old urban park Once inspired Trees At Risk can help any community organizer understand what mistakes to avoid what social forces are in play and just how much truly is at risk Evelyn Herwitz deserves the thanks of all the tree huggers tree lovers and even those not yet educated and inspired As a boy Brent's one great and often expressed fear of growing up was that he might someday no longer want to climb trees Well he's 54 and still climbing every now and then

Trees, Woods and Forests Charles Watkins,2016-09-15 Forests and the trees within them have always been a central resource for the development of technology culture and the expansion of humans as a species Examining and challenging our historical and modern attitudes toward wooded environments this engaging book explores how our understanding of forests

has transformed in recent years and how it fits in our continuing anxiety about our impact on the natural world Drawing on the most recent work of historians ecologist geographers botanists and forestry professionals Charles Watkins reveals how established ideas about trees such as the spread of continuous dense forests across the whole of Europe after the Ice Age have been questioned and even overturned by archaeological and historical research He shows how concern over woodland loss in Europe is not well founded especially while tropical forests elsewhere continue to be cleared and he unpicks the variety of values and meanings different societies have ascribed to the arboreal Altogether he provides a comprehensive interdisciplinary overview of humankind s interaction with this abused but valuable resource

Teaching the Trees Joan Maloof, 2010-09-15 In this collection of natural history essays biologist Joan Maloof embarks on a series of lively fact filled expeditions into forests of the eastern United States Through Maloof s engaging conversational style each essay offers a lesson in stewardship as it explores the interwoven connections between a tree species and the animals and insects whose lives depend on it and who in turn work to ensure the tree s survival Never really at home in a laboratory Maloof took to the woods early in her career Her enthusiasm for firsthand observation in the wild spills over into her writing whether the subject is the composition of forest air the eagle s preference for nesting in loblolly pines the growth rings of the bald cypress or the gray squirrel s fondness for weevil infested acorns With a storyteller s instinct for intriguing particulars Maloof expands our notions about what a tree is through her many asides about the six species of leafhoppers who eat only sycamore leaves or the midges who live inside holly berries and somehow prevent them from turning red As a scientist Maloof accepts that trees have a spiritual dimension that cannot be quantified As an unrepentant tree hugger she finds support in the scientific case for biodiversity As an activist she can t help but wonder how much time is left for our forests
