Trends In Contrast Media:

Trends in Contrast Media Henrik S. Thomsen, Robert N. Muller, Robert F. Mattrey, 2012-12-06 The use of contrast media within diagnostic radiology has been firmly established for many years now. Radiologic contrast media render immense services in daily clinical practice to innumerable patients all over the world. When the new cross-sectional modalities such as computed tomography and magnetic resonance imaging were introduced into clinical practice it rapidly became evident that the judicious use of contrast media allows the optimal exploitation of the great diagnostic potential of these revolutionary methods. More recently efforts to create specific contrast media for ultrasound imaging have been successful and the first beneficial results of their application in daily practice are now evident. The aim of this book is to bring together the results of the tremendous research that has been performed during recent years in order to develop specific contrast media for magnetic resonance imaging and ultrasonography and also to develop safer contrast media for the classical radiologic techniques as well as computed tomography. Moreover, the book provides a comprehensive overview of the indications for and applications of these new contrast media in clinical radiology. Finally, risks, side effects, and complications which may occur with the use of these drugs are covered appropriately. The three editors are leading and well-known experts in their specific field. They have been very successful in ensuring the collaboration of so many internationally known specialists to cover the different topics dealt with in this book.
