Research Libraries, 1978 **Frontiers in Supramolecular Organic Chemistry and Photochemistry** Hans-Jörg Schneider, Heinz Dürr, 1991 From the introductory chapter ep Supramolecular chemistry is chemistry beyond the molecule the designed chemistry of the intermolecular bond It is a novel highly interdisciplinary field of science covering the chemical physical and biological features of chemical species held together and organized by means of intermolecular binding interactions The common thread of all areas of supramolecular chemistry is the information stored in the structural features of molecules and of supermolecules Thus it is a kind of molecular information science that is progressively shaping up Annotation copyrighted by Book News Inc Portland OR **Macromolecular Engineering, Volume 1** Krzysztof Matyjaszewski, Yves Gnanou, Ludwik Leibler, 2007-04-09 The book provides a state of the art description of the synthetic tools to precisely control various aspects of macromolecular structure including chain composition microstructure functionality and topology as well as modern characterization techniques at molecular and macroscopic level for various properties of well defined co polymers in solution bulk and at surfaces The book addresses also the correlation of molecular structure with macroscopic properties additionally affected by processing Finally some emerging applications for the co polymers are highlighted **Gas Flow and Chemical Lasers** Salman Rosenwaks, 1987 The Sixth International Symposium on Gas Flow and Chemical Lasers GCL was held in Jerusalem Israel on September 8 12 1986 The charm and beauty of Jerusalem and the unique blending of ancient and modern made this Symposium an enjoyable experience for the 165 participants and the accompanying persons Yet it seems that the invited and contributed papers presented at the Symposium were equally attractive so that most of the participants attended most sessions resisting the temptations outside the session hall Indeed

many speakers presented up to date results that were obtained or cleared just a few days before the Symposium This volume is a compilation of 19 invited and 61 contributed papers and of a panel discussion on the prospects for short wavelength chemical lasers held at the closing session of the Symposium This discussion is presented as recorded in order to retain the flavour of spontaneous presentation at the risk or advantage of presenting some venturesome ideas and the danger of misquoting In editing the book a deductive approach has been attempted The book starts with some fundamental issues namely fluid dynamics and optics and then deals with the design diagnostics propagation and applications of various gas laser systems covering the wavelength spectrum from XUV to infrared Then follow recent developments of general interest to the laser community and the book concludes with an eye to the future i e with a section on short wavelength chemical lasers
