Technology Regions And Policy:

Technology, Regions, and Policy John Rees, 1986 *Technology Regions and Policy* examines the links between technological change regional development and government policy This timely book provides a synthesis of recent scholarship the results of original research projects carried out by a distinguished group of academics It explores the complex questions of how high technology areas develop the factors influencing the spread of industrial technology and the impact of technological change on labor creation and displacement

Growth Policy in the Age of High Technology Jurgen Schmandt, 2018-03-27 Originally published in 1990 this book provides an authoritative and detailed account of the initiatives of US state governments with science and technology programs designed to foster economic growth Two key questions are posed Do state governments have policy instruments that are sufficiently powerful to affect the levels and growth rates of their regional economies and Are national and global economic forces so powerful that they render state action ineffective Several subsidiary themes are discussed in this context namely the most commonly used policy instruments the impacts on federalism and on governance and how well the universities and other educational institutions serve the economic activities imposed on them

New Models In Geography Richard Peet, Nigel Thrift, 2013-10-11 First published in 1989 It seems such a long time ago another age yet it is a mere twenty odd years since the original *Models in Geography* was published It is an even shorter time since the first tentative steps were taken towards an alternative formulation of what might constitute a geographical perspective within the social sciences What came to be called the political economy perspective has progressed with remarkable speed and energy to generate its own framework of conceptualization and analysis its own questions and debates The papers in these two volumes are witness to the richness and range of the work which has developed over this relatively short period within the political economy approach Moreover from being a debate within an institutionally defined discipline of geography to introducing into that discipline ideas and discussions from the wider fields of philosophy and social science and the humanities more generally it has now flowered into a consistent part of enquiries that span the entire realm of social studies

Regional Innovation, Knowledge and Global Change Zoltan Acs, 2013-12-19 First Published in 1999 The process of globalization is shaped and reinforced by a rapidly changing knowledge environment As economies become less constrained national frontiers they become more geographically specialized Thus important elements of the innovation process tend to become regional rather than national In this new environment large corporations are weakening their links with their home country spreading their innovation activities to source different regional systems of innovation Regional networks of firms are creating new forms of learning and production The aim of this book is to broaden both conceptually and empirically the national systems of innovation approach developed by Lundvall Freeman Nelson and others While recognizing the creative nature of economic adjustment in a turbulent world and the highly uneven distribution of economic growth the national systems approach lacks a mechanism by

which to understand innovation when realistic unit of analysis is no longer the nation state Written by leading scholars in the field this book provides a ground breaking examination of sub regional systems of innovation in an interconnected global economy

Regions in Recession and Resurgence Michael Chisholm,2015-03-27 The world economy has undergone rapid evolution in recent decades along with changes in the importance of industries and their organization and sharp changes in the fortunes of regions There are differences of opinion regarding the mainsprings of change and development and the role of governments in fostering national output In order to show the relevance of these changes to regional economies the book focuses on the different schools of economic thought from the neo classical through Keynesian to Marxist radical ideas and monetarist supply side thinking providing a brief description of their structure in non spatial terms The way these theories map into contrasting ideas regarding the mechanisms of regional economic growth is then explained The book concentrates on developed economies and explicitly seeks to confront theory with fact fact with theory Bringing together non spatial economic theory regional growth theory and relevant empirical data this book is intended for students in geography and regional economics but will also be of interest for those studying politics and government

of Development convened in Israel in 1957 to mark the inauguration of a new building for the Department of Economics at the Hebrew University of Jerusalem the eminent US economist Simon Kuznets stated that developed small states seem to have succeeded in spreading the fruits of economic growth more widely among their populations than the larger states at comparable levels of income per capita
