The forbid/allow asymmetry Bregje Holleman, 2021-09-13 Questionnaires are widely used in the social sciences and very often survey data form the basis for governmental and commercial planning or evaluation Yet the quality of survey data is not attested to since a large variety of factors in the language use situation prove to influence the answers unintentionally The forbid allow asymmetry is a well known example of this when respondents are asked whether something should be forbidden about 50% may answer yes forbid whereas an equivalent question phrased with the verb to allow could well cause up to 75% of the respondents to answer no it should not be allowed Which question wording is preferable to measure respondents true attitudes Only when we know why the answers differ can we decide on that This book is the first to apply a systematic cognitive approach to describe the causes of the forbid allow asymmetry The question answering process is unravelled by a variety of experiments and meta analytic techniques Analyses reveal that the difference in question wording does not prompt respondents to retrieve different attitudes Instead the asymmetry reflects that the question wording causes the response options to be used differently Because of the qualifying dimensions in the question text the meanings of yes and no change as well as the cognitive distance between them This study sheds a different light on processes of question answering and text

interpretation Furthermore practical advice on questionnaire design and on the interpretation of survey data is given on the basis of these new insights
