Colorectal Cancer: Molecular Mechanisms, Premalignant State and Its Prevention W. Schmiegel,J.

Schölmerich,1999-04-30 Colorectal cancer is one of the most common causes of tumour associated death in Western countries and its incidence has been increasing in recent decades The most important determinant for the course of the disease is tumour stage at the time of diagnosis The detection of molecular changes in tumour tissue and in benign adenomatous polyps has improved our knowledge of colorectal carcinogenesis Diseases with a high risk for malignant transformation as well as family predisposition as an independent risk factor have been identified Furthermore dietary and environmental factors together with the intake of aspirin and other NSAIDs influence tumor development This implies new ways of specific testing for early diagnosis and new prevention strategies based on endoscopy and drug therapy The main topics of this book the proceedings of the international Falk Symposium No 109 held in Titisee Germany on October 14 15 1998 are molecular mechanisms premalignant state and prevention State of the art chapters deliver the latest scientific developments on every topic followed by more detailed chapters on specific items **Advances in Hepatobiliary and**

Rogler,F. Kullman,P. Rutgeerts,R.B. Sartor,J. Schölmerich,2000-07-31 Although the first description of patients with what we now call Crohn s disease or ulcerative colitis was published well before 1900 both disorders seem to be diseases of the twentieth century At the very start of the twenty first century it therefore seems appropriate to look back and at the same time look forward and to assess what knowledge has been gained during the last 100 years and in what direction research and thereby clinical practice will go in the future This book the proceedings of Falk Symposium No 111 held in Freiburg Germany on June 19 20 1999 contains contributions from experienced senior scientists on the state of the art in pathophysiology diagnosis and treatment together with unpublished and new findings from young researchers Basic scientists and clinicians are thereby involved in an exchange of information which will lead to new directions for future research and clinical management of inflammatory bowel diseases
