There is today widespread recognition of the fact that the future of human civilization depends to a high degree upon Man's capacity to understand the forces and factors which control his own behaviour. Such understanding must be achieved not only as regards individual conduct but equally as regards the mass phenomena resulting from group contacts which are becoming increasingly intimate and influential. Until this present volume nowhere have the three sciences of sociology, psychology and social anthropology been properly mobilized to deal with the social problems which yearly grow more pressing. The essays in this book aim to address this.

Framing research as the process of asking and answering questions, this book demonstrates how to identify good research questions and how to structure and explore them successfully. Whether you are just beginning your research journey or are a seasoned traveller, it helps you decide what you want to achieve with your research. Know what options you have to explore your goals. Navigate the nuances of different research approaches. Understand the decisions of other researchers. Choose what path best suits your project. Through real-life examples demonstrating different types of research, the book introduces qualitative, quantitative, and mixed methods approaches so you can compare different methods at every stage of the research process, from initial idea and design to data collection and analysis. This new edition includes new chapters on collecting and analysing mixed methods data and additional content on qualitative data analysis. New examples reflect the cultural and global diversity of social research and extra visual aids and summaries support understanding of key research concepts and stages. The book is accompanied by an online teaching guide including videos, additional case studies, annotated articles, and critical thinking exercises.
