Mathematical Optimization Jan Snyman,2005-12-15 It is intended that this book be used in senior to graduate level semester courses in optimization as offered in mathematics engineering computer science and operations research departments Hopefully this book will also be useful to practising professionals in the workplace The contents of the book represent the fundamental optimization material collected and used by the author over a period of more than twenty years in teaching Practical Mathematical Optimization to undergraduate as well as graduate engineering and science students at the University of Pretoria The principal motivation for writing this work has not been the teaching of mathematics per se but to equip students with the necessary fundamental optimization theory and algorithms so as to enable them to solve practical problems in their own particular principal fields of interest be it physics chemistry engineering design or business economics The particular approach adopted here follows from the author's own personal experiences in doing research in solid state physics and in mechanical engineering design where he was constantly confronted by problems that can most easily and directly be solved via the judicious use of mathematical optimization techniques This book is however not a collection of case studies restricted to the above mentioned specialized research areas but is intended to convey the basic optimization principles and algorithms to a general audience in such a way that hopefully the application to their own practical areas of interest will be relatively simple and straightforward **Pedestrian Model Parametric Studies.
