Three Predators:

Predator Richard Whittle,2014-09-16 A history of the Predator drone discussing how it transformed the American military reshaped modern warfare and triggered a revolution in aviation The Coevolutionary Process John N. Thompson,2009-04-24 Traditional ecological approaches to species evolution have frequently studied too few species relatively small areas and relatively short time spans In The Coevolutionary Process John N Thompson advances a new conceptual approach to the evolution of species interactions the geographic mosaic theory of coevolution Thompson demonstrates how an integrated study of life histories genetics and the geographic structure of populations yields a broader understanding of coevolution or the development of reciprocal adaptations and specializations in interdependent species Using examples of species interactions from an enormous range of taxa Thompson examines how and when extreme specialization evolves in interdependent species and how geographic differences in specialization adaptation and the outcomes of interactions shape coevolution Through the geographic mosaic theory Thompson bridges the gap between the study of specialization and coevolution in local communities and the study of broader patterns seen in comparisons of the phylogenies of interacting species **Behavioural Mechanisms of Food Selection** Roger N. Hughes,2013-06-29 Behavioural Mechanisms of Food Selection examines animals belonging to diverse trophic groups from carnivores herbivores micro algal grazers to filter feeders and detritus feeders In the past Optimal Foraging Theory has been applied to all these groups but in different ways and in disciplines that rarely overlap Here concepts and developments hitherto scattered in the literature are drawn together This uniquely broad synthesis captures the state of the art in the study of diet selection and prescribes new objectives in theoretical development and research Coexistence in Ecology Mark A. McPeck,2022-02-08 A comprehensive framework for understanding species coexistence Coexistence is the central concept in community ecology but an understanding of this concept requires that we study the actual mechanisms of species interactions Coexistence in Ecology examines the major features of these mechanisms for species that coexist at different positions in complex food webs and derives empirical tests from model predictions Exploring the various challenges species face Mark McPeck systematically builds a model food web beginning with an ecosystem devoid of life and then adding one species at a time With the introduction of each new species he evaluates the properties it must possess to invade a community and quantifies the changes in the abundances of other species that result from a successful invasion McPeck continues this process until he achieves a multitrophic level food web with many species coexisting at each trophic level from omnivores mutualists and pathogens to herbivores carnivores and basic plants He then describes the observational and experimental empirical studies that can test the theoretical predictions resulting from the model analyses Synthesizing decades of theoretical research in community ecology Coexistence in Ecology offers new perspectives on how to develop an empirical program of study rooted in the natural histories of species and the mechanisms by which they actually interact with one another Bulletin ,1908

Biology and Ecology of Fishes James S. Diana, Tomas O. Höök, 2023-07-17 Biology and Ecology of Fishes Immerse yourself in the world of fish ecology with the newest edition of this essential introduction The study of fish ecology has traditionally proceeded along two tracks the first is more basic concerned with the anatomy physiology and theoretical ecology of fish and the second is more practical concerning itself with fish populations management and habitats Many fish researchers have come to view this distinction as artificial and to develop a new study of fish that combines both tracks in a single holistic approach It has never been more critical for introductory textbooks to represent this combined study in order to prepare the next generation of fish biologists and fishery scientists Biology and Ecology of Fishes meets this need with a textbook that incorporates both biology and population management Beginning with a general introduction to aquatic life and ecosystems this book covers anatomical environmental and ethological topics to give a thoroughly rounded view of its subject promising to serve as the fundamental introduction to multidisciplinary fish studies Readers of the third edition of Biology and Ecology of Fishes will also find Detailed coverage of subjects including growth and bioenergetics feeding and predation mortality and recruitment and more Increased attention to stressors of fish populations and communities New and revised chapters that introduce quantitative methods and present emerging issues facing fish populations and communities Biology and Ecology of Fishes is a useful overview for advanced undergraduate and graduate students studying fish ecology or fishery biology as well as a reference for researchers and professionals in fish ecology fish population management and related fields
