**Uncertainty and Public Investment Multipliers: The Role of Economic Confidence** William Gbohoui,2021-11-12 This paper investigates how macroeconomic uncertainty affects the fiscal multiplier of public investment In theory uncertainty can reduce the multiplier if the private sector becomes more cautious and does not respond to the fiscal stimulus Conversely it can increase the fiscal multiplier if public investment shocks improve private agents expectations about future economic outlook and lead to larger private spending Using the disagreement about GDP forecasts as a proxy for uncertainty we find that unexpected increases in public investment have larger and longer lasting effects on output investment and employment during periods of high uncertainty with multipliers above 2 and the larger multipliers are not driven by economic slack Public investment shocks are also found to boost private sector confidence during heightened uncertainty driving up expectations about future economic development which in turn magnify private sector response to the initial stimulus
