Keith,2014-12-19 Multiple Regression and Beyond offers a conceptually oriented introduction to multiple regression MR analysis and structural equation modeling SEM along with analyses that flow naturally from those methods By focusing on the concepts and purposes of MR and related methods rather than the derivation and calculation of formulae this book introduces material to students more clearly and in a less threatening way In addition to illuminating content necessary for coursework the accessibility of this approach means

students are more likely to be able to conduct research using MR or SEM and more likely to use the methods wisely Covers both MR and SEM while explaining their relevance to one another Also includes path analysis confirmatory factor analysis and latent growth modeling Figures and tables throughout provide examples and illustrate key concepts and techniques For additional resources please visit http tzkeith com   **Biotechnology Software** ,1992   **Participation and Empowerment** Erik J. Groessl,1999 Health care costs continue to increase at a rapid pace in the United States Costs for people with chronic illnesses might be reduced while improving or maintaining their quality of life The present study builds on the results of an empowerment based social support and education intervention designed to reduce health care costs among older people with osteoarthritis The participants were 363 members of a Health Maintenance Organization Previous results of the study indicated that the interventions were cost effective and quality of well being was increased or maintained However it was unclear what elements of the intervention were most important and which type of people benefited most First the present study used survival analysis to investigate predictors of intervention participation which is related to the process of empowerment Then the study examined a model of the causal relationships between the four latent constructs of Participant Characteristics Empowerment Process Empowerment Outcomes and Health Outcomes Finally content analysis was used to examine qualitative data from the intervention meetings In addition four and five year follow up data were collected to examine long term health benefits and cost savings Specific hypotheses were a groups and individuals that continued to meet longer would have lower health care costs and higher quality of well being than those who met for a shorter time b the discussion content of groups that continued longer would have more of an empowerment focus emphasizing patient involvement and decision making Results indicated that cost savings and improved health status were not maintained at the 4 and 5 yr follow up Baseline health care costs and self efficacy were significant predictors of attendance and participation in the intervention The proposed structural equation model adequately fit the sample data from the 1 yr follow up assessment However a number of important paths among latent variables were not significant The discussion contents of the intervention groups were significant predictors of psychosocial and health outcome variables
