

# LIDAR AND ARCHAEOLOGY

## WHAT IS LIDAR?

LIDAR stands for Light Detection And Ranging, a technology invented in the 1960s. It's a remote sensing technology system that collects data about ranges, or distances, using lasers. It has a number of benefits:

- It can more easily collect data over a large area.
- It can be used to create maps.
- It can map areas that are not visible to the human eye.

Because of its special features, LIDAR is now being used by archaeologists.

## UNCOVERING TIKAL

Because of its ability to "see" through a tree canopy, airborne LIDAR is of particular use in archaeology. For example, at the Tikal site in Guatemala, aerial photography can only show some of the buildings. LIDAR reveals what is under the canopy, helping archaeologists learn more about the area's agriculture, population size, and other aspects of the Mayan civilization that they did not know before.

## MAIN PARTS OF AN AIRBORNE LIDAR SYSTEM

Plane/Helicopter/Drone—carries the moving technology

Laser—sends out an echo pulse

Laser Sensor—detects the reflected pulse to measure the range

Global Positional System (GPS) ground reference and satellites—detect aircraft position

Inertial Measurement Unit system (IMU)—determines aircraft's orientation

Lasers sweep across the terrain measuring the range and scan angle to ground.

A camera sees only the nearest objects, not what's underneath the canopy.

## LIDAR IN ACTION

Vegetation limits aerial photography. It does not limit LIDAR. Where light can go, LIDAR can go. LIDAR pulses reflect from multiple points, starting at the first item they hit, and continue to the ground. So LIDAR can provide information about things that people cannot see.

# What A Find Using Archaeology To Unearth A System
