Vocabulary Control for Information Retrieval Frederick Wilfrid Lancaster,1976 *An Introduction to Various Methods of Vocabulary Control for Information Retrieval* Paul E. Dumont,1968 *Vocabulary Control and Search Strategies in Online Searching* Alice Yanosko Chamis,1991-09-25 Databases and public access catalogs are being used extensively by the public and the academic and business communities as major sources of information Most users want to access these databases directly to locate the information they need Increasingly users are demanding user friendly databases that will assist them in finding conceptual information effectively The lack of compatibility or standardization among many different indexing vocabularies and thesauri makes it difficult to find related information in information retrieval systems containing many different online databases This book provides a thought provoking new perspective on the role of vocabulary control in providing access to the conceptual information found in online databases and catalogs The first three chapters provide a basis for understanding the structure of vocabulary control systems used for the indexing of conceptual information Chapters 4 and 5 which deal with thesaural relationship model formulation and investigation will be of the greatest interest to designers of online databases and public access catalogs who are striving to improve access to conceptual information from multiple databases Researchers and developers of thesauri who are faced with the problems of compatibility and convertibility will also be interested in testing the applicability of the thesaural relationship model for other vocabulary control systems The findings reported in chapter six will be of particular interest to database producers and vendors Although switching and frequency online search strategies for database search engines are not yet available end users and experienced searchers can still incorporate these concepts to improve the effectiveness of their searches Recommendations resulting from this investigation are summarized in the final chapters With the proliferation of online databases and the increasing number of inexperienced users the development of new search strategies to facilitate easier searches is critical This book will be required reading for everyone involved in this effort *The Taxobook* Marjorie Hlava,2022-05-31 This book outlines the basic principles of creation and maintenance of taxonomies and thesauri It also provides step by step instructions for building a taxonomy or thesaurus and discusses the various ways to get started on a taxonomy construction project Often the first step is to get management and budgetary approval so I start this book with a discussion of reasons to embark on the taxonomy journey From there I move on to a discussion of metadata and how taxonomies and metadata are related and then consider how where and why taxonomies are used Information architecture has its cornerstone in

taxonomies and metadata While a good discussion of information architecture is beyond the scope of this work I do provide a brief discussion of the interrelationships among taxonomies metadata and information architecture Moving on to the central focus of this book I introduce the basics of taxonomies including a definition of vocabulary control and why it is so important how indexing and tagging relate to taxonomies a few of the types of tagging and a definition and discussion of post and pre coordinate indexing After that I present the concept of a hierarchical structure for vocabularies and discuss the differences among various kinds of controlled vocabularies such as taxonomies thesauri authority files and ontologies Once you have a green light for your project what is the next step Here I present a few options for the first phase of taxonomy construction and then a more detailed discussion of metadata and markup languages I believe that it is important to understand the markup languages SGML and XML specifically and HTML to a lesser extent in relation to information structure and how taxonomies and metadata feed into that structure After that I present the steps required to build a taxonomy from defining the focus collecting and organizing terms analyzing your vocabulary for even coverage over subject areas filling in gaps creating relationships between terms and applying those terms to your content Here I offer a cautionary note don t believe that your taxonomy is done Regular scheduled maintenance is an important critical really component of taxonomy construction projects After you ve worked through the steps in this book you will be ready to move on to integrating your taxonomy into the workflow of your organization This is covered in Book 3 of this series Table of Contents List of Figures Preface Acknowledgments Building a Case for Building a Taxonomy Taxonomy Basics Getting Started Terms The Building Blocks of a Taxonomy Building the Structure of Your Taxonomy Evaluation and Maintenance Standards and Taxonomies Glossary End Notes Author Biography

Harold P. Lehmann, Patricia A. Abbott, Nancy K. Roderer, Adam Rothschild, Steven Mandell, Jorge Ferrer, Robert E. Miller, Marion J. Ball, 2013-06-29 One of the hottest political issues today concerns ways to improve national healthcare systems without incurring further costs. An extensive study by the Institute of Medicine (IOM) in the United States formally reported that computer-based patient records are absolutely necessary to help contain the cost explosion in health care. The information obtained from experts, the studies conducted, and the conclusions that went into the IOM's report have now been collected in *Aspects of the Computer-Based Patient Record*. A large portion of the volume discusses the state of the art in existing computer-based systems as well as the essential needs which must be addressed by future computer-based patients records. A final section in the book discusses implementation strategies for changing to the electronic system and practical issues: Who will bear the final cost? How and when will healthcare providers who use the system be trained? This volume contains the concise, valuable information which hospital administrators, hospital systems designers, third-party payer groups, and medical technology providers will need if they hope to successfully transit to hospital systems which use a computer-based patient record.
