disciplines and sadly many insights do not reach workplace managers in practice Therefore this new book series is started by associate professor Rianne Appel Meulenbroek Eindhoven University of Technology the Netherlands and postdoc researcher Vitalija Danivska Aalto University Finland as editors published by Routledge It is titled Transdisciplinary Workplace Research and Management because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice The books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace related issues in practice such as knowledge worker productivity office use and more strategic management In addition the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice This book series is relevant for workplace experts both in academia and industry This second book in the series focuses on the role of workplace management in the organization and the tasks that workplace management needs to consider The 18 theories that are presented in this book and applied to workplace research discuss management aspects from the organization s perspective or dive deeper into issues related to people and or building management They all emphasize that workplace management is a complex matter that requires more strategic attention in order to add value for various stakeholders The final chapter of the book describes a first step towards integrating the presented theories into an interdisciplinary framework for developing a grand workplace management theory

web find the equation of the line in all three forms listed above two of the forms require slope so let's find that first slope  $m = \frac{\Delta y}{\Delta x} = \frac{5 - 4}{5 - 2} = \frac{1}{3}$  now we can plug in  $m$  and one of the points say  $(5, 5)$  to get point slope form  $y - 5 = \frac{1}{3}(x - 5)$

web what is the equation for a vertical line the slope is undefined and where does it cross the  $y$  axis in fact this is a special case and we use a different equation not  $y$  but instead we use  $x$  like this  $x = 1.5$  every point on the line has  $x$  coordinate  $1.5$  that is why its equation is  $x = 1.5$
