Foundations of Component-Based Systems Gary T. Leavens,Murali Sitaraman,2000-03-28 This collection of articles by well known experts was originally published in 2000 and is intended for researchers in computer science practitioners of formal methods and computer programmers working in safety critical applications or in the technology of component based systems The work brings together several elements of this area that were fast becoming the focus of much research and practice in computing The introduction by Clemens Szyperski gives a snapshot of research in the field About half the articles deal with theoretical frameworks models and systems of notation the rest of the book concentrates on case studies by researchers who have built prototype systems and present findings on architectures verification The emphasis is on advances in the technological infrastructure of component based systems how to design and specify reusable components and how to reason about verify and validate systems from components Thus the book shows how theory might move into practice

Coordination Languages and Models Paolo Ciancarini,Alexander L. Wolf,2003-07-31 We welcome you to Coordination 99 the third in a series of conferences dedicated to an important perspective on the development of complex software systems That perspective is shared by a growing community of researchers interested in models languages and implementation techniques for coordination The last decade has seen the emergence of a class of models and languages variously termed coordination languages coordination languages architectural description languages and agent oriented programming languages

These formalisms provide a clean separation between individual software components and their interaction within the overall software organization. This separation makes complex applications more tractable, supports global analysis, and enhances the reuse of software components. The proceedings of the previous two conferences on this topic were published by Springer as Lecture Notes in Computer Science 1061 and 1282. This issue of LNCS, containing the papers presented at Coordination 99, continues the tradition of carefully selected and high quality papers representing the state of the art in coordination technology. In response to the call for papers, we received 67 submissions from which 26 papers were accepted. These proceedings also contain abstracts for posters presented at the conference. This year's program features invited talks by Rocco De Nicola and Danny B. Lange. Reading through the papers, we expect that you may be surprised by the variety of disciplines within computer science that have embraced the notion of coordination. In fact, we expect this trend to continue and hope that you will contribute to the ongoing exploration of its strengths, weaknesses, and applications.
