Scherer, 1990-04-28 Presents the physical and chemical principles of the sol gel process of ceramic preparation at a level suitable for graduate students and practitioners in the field **Handbook of sol-gel science and technology. 1. Sol-gel processing** Sumio Sakka, 2005 Since Dr Dislich of Germany prepared a glass lens by the sol gel method around 1970 sol gel science and technology has continued to develop Since then this field has seen remarkable technical developments as well as a broadening of the applications of sol gel science and technology There is a growing need for a comprehensive reference that treats both the fundamentals and the applications and this is the aim of Handbook of Sol Gel Science and Technology The primary purpose of sol gel science and technology is to produce materials active and non active including optical electronic chemical sensor bio and structural materials This means that sol gel science and technology is related to all kinds of manufacturing industries Thus Volume 1 Sol Gel Processing is devoted to general aspects of processing Newly developed materials such as organic inorganic hybrids photonic crystals ferroelectric coatings photocatalysts will be covered Topics in this volume include Volume 2 Characterization of Sol Gel Materials and Products highlights the important fact that useful materials are only produced when characterization is tied to processing Furthermore characterization is essential to the understanding of nanostructured materials and sol gel technology is a most important technology in this new field Since nanomaterials display their functional property based on their nano and micro structure characterization is very important Topics found in Volume 2 include Sol gel technology is a versatile technology making it possible to produce a wide variety of materials and to provide existing substances with novel properties This technology was applied to producing novel materials for example organic inorganic hybrids which are quite difficult to make by other fabricating techniques and it was also applied to producing materials based on high temperature superconducting oxides Applications of Sol Gel Technology Volume 3 will cover applications such as *Handbook of Sol-gel Science and Technology: Applications of sol-gel technology* Sumio Sakka, 2005 *Sol Gel Science and Technology*, 2003 **Sol-Gel Science and Technology** Sumio Sakka, 2002-10-31 Sol Gel Science and Technology covers optical electronic and magnetic chemical mechanical biomedical and biotechnological materials Concerning the microstructures the sol gel method applies to porous materials dense materials like glasses and ceramics organic inorganic hybrids and nanocomposites The four volumes of this reference treat four areas that are timely important and seeing great research activity Sol gel prepared ferroelectrics and related materials Sol gel processing of titanium oxides photocatalyst and other applications Sol gel prepared organic inorganic hybrids and nanocomposites Sol gel processing of porous materials application to catalysts enzymes chemical analysis sensors and membranes The goal of these four volumes is to disseminate the recent research results published in recent issues of Journal of Sol Gel Science and Technology which is a unique journal devoted to Sol Gel **Sol-gel Science and Technology**, 2005 **Sol-Gel Science and Technology** Sumio Sakka, 2002-10-31 Sol Gel Science and Technology covers optical electronic and magnetic chemical mechanical biomedical
