variation across individuals and cultures in categorization behaviour Meanwhile philosophers of language and mind have investigated the semantic properties of concepts and how concepts are related to linguistic meaning and linguistic communication A key motivation behind this was the idea that concepts must be shared across individuals and cultures With the dawn of experimental philosophy the proposal that the experimental data from psychology lacks relevance to semantics is increasingly difficult to defend This volume brings together leading psychologists and philosophers to advance the interdisciplinary debate on the role of concepts in categorizing and reasoning the relationship between concepts and linguistic meaning and communication the challenges conceptual variation poses to communication and the social and political effects of conceptual change
