Soft Computing Techniques And Applications:

Soft Computing in Information Retrieval Fabio Crestani, Gabriella Pasi, 2013-03-19 Information retrieval IR aims at defining systems able to provide a fast and effective content based access to a large amount of stored information The aim of an IR system is to estimate the relevance of documents to users information needs expressed by means of a query This is a very difficult and complex task since it is pervaded with imprecision and uncertainty Most of the existing IR systems offer a very simple model of IR which privileges efficiency at the expense of effectiveness A promising direction to increase the effectiveness of IR is to model the concept of partially intrinsic in the IR process and to make the systems adaptive i e able to learn the user s concept of relevance To this aim the application of soft computing techniques can be of help to obtain greater flexibility in IR systems

This book plays a significant role in improvising human life to a great extent. The new applications of soft computing can be regarded as an emerging field in computer science, automatic control, engineering, medicine, biology, application, natural environmental engineering, and pattern recognition. Now the exemplar model for soft computing is human brain. The use of various techniques of soft computing is nowadays successfully implemented in many domestic, commercial, and industrial applications due to the low cost and very high performance digital processors and also the decline price of the memory chips. This is the main reason behind the wider expansion of soft computing techniques and its application areas. These computing methods also play a significant role in the design and optimization in diverse engineering disciplines. With the influence and the development of the Internet of things (IoT) concept, the need for using soft computing techniques has become more significant than ever. In general, soft computing methods are closely similar to biological processes than traditional techniques which are mostly based on formal logical systems such as sentential logic and predicate logic or rely heavily on computer-aided numerical analysis. Soft computing techniques are anticipated to complement each other. The aim of these techniques is to accept imprecision, uncertainties, and approximations to get a rapid solution. However, recent advancements in representation, soft computing algorithms, fuzzy logic, evolutionary computation, machine learning, and probabilistic reasoning generate a more intelligent and robust system providing a human-interpretable, low-cost approximate solution. Soft computing-based algorithms have demonstrated great performance to a variety of areas including multimedia, retrieval, fault tolerance, system modelling, network architecture, Web semantics, big data analytics, time series, biomedical, and health informatics, etc. Soft computing approaches such as genetic programming, GP, support vector machine, firefly algorithm, SVM, FFA, artificial neural network, ANN, and support vector machine wavelet, SVM Wavelet, have emerged as powerful computational models. These have also shown significant success in dealing with massive data analysis for a large number of applications. All the researchers and practitioners will be highly benefited; those who are working in the field of computer engineering, medicine, biology, application, signal processing, and mechanical engineering. This book is a good collection of state-of-the-art approaches for soft computing-based applications to various engineering fields. It is very beneficial for the new researchers and practitioners working in the field to quickly know the best performing methods. They would be able to compare different approaches and can carry forward their research in the most important area of research which has direct impact on betterment of the human life and health. This book is very

useful because there is no book in the market which provides a good collection of state of the art methods of soft computing based models for multimedia retrieval fault tolerance system modelling network architecture Web semantics big data analytics time series and biomedical and health informatics *Soft Computing* Mangey Ram, Suraj B. Singh, 2020-08-24 Soft computing is used where a complex problem is not adequately specified for the use of conventional math and computer techniques Soft computing has numerous real world applications in domestic commercial and industrial situations This book elaborates on the most recent applications in various fields of engineering
