Solar System Magnetic Fields:

Magnetic Fields in the Solar System Hermann Lühr, Johannes Wicht, Stuart A. Gilder, Matthias Holschneider, 2018-01-10 This book addresses and reviews many of the still little understood questions related to the processes underlying planetary magnetic fields and their interaction with the solar wind With focus on research carried out within the German Priority Program PlanetMag it also provides an overview of the most recent research in the field Magnetic fields play an important role in making a planet habitable by protecting the environment from the solar wind Without the geomagnetic field for example life on Earth as we know it would not be possible And results from recent space missions to Mars and Venus strongly indicate that planetary magnetic fields play a vital role in preventing atmospheric erosion by the solar wind However very little is known about the underlying interaction between the solar wind and a planet's magnetic field The book takes a synergistic interdisciplinary approach that combines newly developed tools for data acquisition and analysis computer simulations of planetary interiors and dynamos models of solar wind interaction measurement of ancient terrestrial rocks and meteorites and laboratory investigations *Solar System Magnetic Fields* E.R. Priest, 2012-12-06 In September 1984 a Summer School on Solar System Plasmas was held at Imperial College with the support of the Science and Engineering Research Council An excellent group of lecturers was assembled to give a series of basic talks on the various aspects of the subject aimed at Ph D students or researchers from related areas wanting to learn about the plasma physics of the solar system The students were so appreciative of the lectures that it was decided to write them up as the present book Traditionally different areas of solar system science such as solar and magnetospheric physics have been studied by separate communities with little contact However it has become clear that many common themes cut right across these distinct topics such as magnetohydrodynamic instabilities and waves magnetic reconnect ion convection dynamo activity and particle acceleration The plasma parameters may well be quite different in the Sun's atmosphere a cometary tail Jupiter's magnetosphere but many of the basic processes are similar and it is by studying them in different environments that we come to understand them more deeply Furthermore direct in situ measurements of plasma properties at one point in the solar wind or the magnetosphere complement the more global view by remote sensing of a similar phenomenon at the Sun

The Magnetic Solar System Ulrich von Kusserow, Eckart Marsch, 2025-04-28 This book describes a great variety of significant space plasma processes and the eminent influence that in particular magnetic processes have on the formation structure and development of objects in our solar system Supported by vivid graphics real shots and links to video sequences all these processes are while being didactically prepared explained thoroughly with few mathematical derivations The book is written mainly for students but also for amateurs or scientists from various fields interested in space science It appeals to those who may want to gain a comprehensive overview of the far reaching impacts of magnetic fields on many things in our solar system or beyond in extrasolar planetary systems and stars in the distant universe The topics discussed here with

emphasis on magnetism comprise the structure and dynamics of the solar system and its objects the solar interior and atmosphere the time variable solar activity the solar wind processes in the heliosphere and planetary magnetospheres as well as space weather Scientific instruments experiments and measurement methods are presented with the help of which solar and plasma physicists astrophysicists and planetary scientists can today gain their deep and fascinating insights Theoretical and numerical results are interpreted and recent observations are explained which were made by modern telescopes on Earth and obtained by satellites in space through either optical remote sensing and or in situ plasma measurements
