Casting: Brian Cantor, K O'Reilly, 2002-12-06 Written by leading experts in their respective fields Solidification and Casting provides a comprehensive review of topics fundamental to metallurgy and materials science as well as indicates recent trends From an industrial perspective the book begins with chapters on the casting techniques most commonly used in industry today It then describes the underlying science fundamental to solidification mechanisms including fluid flow the effects of cooling rates modern simulation and modelling methods in use and their application in various casting scenarios Next the authors consider the microstructure of cast materials and their defects and explore how different casting processes can control these parameters The book concludes with the most recent developments in the field and discusses new processes and materials such as novel alloys and composites metallic glasses ceramics and superconducting oxides

Science and Engineering of Casting Solidification, Second Edition Doru Michael Stefanescu, 2008-12-03 Stefanescu here attempts to describe solidification theory through the complex mathematical apparatus required for a fundamental treatment of the problem The mathematics is however restricted to the elements essential to attain a working knowledge in the field This is in line with the main goal of the book which is to educate the reader in the fast moving area of computational modeling of solidification of castings A special effort has been made to introduce the reader to the latest developments in solidification theory including in this second edition a new chapter on semi solid casting **Directional Solidification of Steel Castings** R. Wlodawer, 2013-10-22 Directional Solidification of Steel Castings summarizes the results of a large number of investigations mostly scientific in character on the directional solidification of steel castings The influence of design on the technical possibilities of producing casting in the foundry is examined Diagrams simple basic rules and formulae are provided along with many practical examples This book is comprised of 16 chapters and begins with an introduction to the technical and psychological aspects of steel casting before turning to a discussion of the influence of shape and dimensions on the time it takes for castings to solidify The thermal gradient feeder heads and cavities in steel castings are then considered In particular the effect of the thermal gradient on solidification and feeding range are examined

Methods for increasing the thermal gradient in the casting are described including the use of mold heating pads breaker cores or Washburn cores external cooling iron chills cooling fins internal chills and exothermic pads Cavities in steel castings which are commonly mistaken for true shrinkage cavities are also analyzed This monograph is particularly suitable for foundry managers foremen technicians casting designers and students *Casting Design and Performance* ,2009

Materials Processing During Casting Hasse Fredriksson,Ulla Åkerlind,2006-05-12 Casting is one of the most important processes in materials technology In this unique book each step in the casting and solidification process is described and models are set up which in many cases can be approximated by simplified analytical expressions All casting methods are featured including component casting ingot casting and continuous casting Applications of the results are given in numerous worked examples within the text Conclusions on how to avoid cracks solidification pores slag inclusions and other defects of the castings can be drawn from the theoretical models These conclusions are based on research results which together give an idea of the development in the manufacture of castings Most chapters conclude with a number of exercises answers to which are given at the end of the book The accompanying Guide to Exercises provides the complete solutions to each of the exercises *Advances in the Science and Engineering of Casting Solidification* Laurentiu Nastac,Baicheng Liu,Hasse Fredriksson,Jacques Lacaze,Chun-Pyo Hong,Adrian Catalina,Andreas Buhrig-Polaczek,Daan M. Maijer,Charles Andrew Monroe,Adrian S. Sabau,Roxana Ruxanda,Alan A. Luo,Subhayu Sen,Attila Diószegi,2015-02-18 The book contains the proceedings of the honorary symposium Advances in the Science and Engineering of Casting Solidification TMS2015 Orlando Florida March 15 19 2015 held in honor of Professor Doru Michael Stefanescu Emeritus Professor Ohio State University and the University of Alabama USA The book encompasses the following four areas 1 Solidification processing theoretical and experimental investigations of solidification processes including castings solidification directional solidification of alloys electromagnetic stirring ultrasonic cavitation mechanical vibration active cooling and heating powder bed electron beam melting additive manufacturing etc for processing of metals polymers and composite materials 2 Microstructure Evolution theoretical and experimental studies related to microstructure evolution of materials including prediction of solidification related defects and particle pushing engulfment aspects 3 Novel Casting and Molding Processes modeling and experimental aspects including high pressure die casting permanent casting centrifugal casting low pressure casting 3D silica sand mold printing etc and 4 Cast Iron all aspects related to cast iron characterization computational and analytical modeling and processing **Solidification and Cast Structure** I. Minkoff,1986-08-11 This practical guide presents a comprehensive account of solidification processes in metals and alloys and describes the manner in which cast structure arises Reviews the principle features of solidification theory in an accessible and easily understood manner Relates the solidification and cast structure process to different industrial processes such as conventional casting continuous casting welding and rapid solidification Provides concise descriptions of structure formation in cast steel cast iron and aluminum Includes treatment of

cast ceramics glass metal nonmetal structures rapid solidification welding and continuous casting processes

Fundamentals of Metal Casting Richard Aloysius Flinn,1963 *New Materials, Applications and Processes* Jian Min Zeng,Yun Hae Kim,Yan Feng Chen,2011-11-22 Selected peer reviewed papers from the International Conference on Chemical Material and Metallurgical Engineering ICCMME 2011 December 23 25 2011 Beihai China Superalloys Matthew J. Donachie,Stephen J. Donachie,2002 This book covers virtually all technical aspects related to the selection processing use and analysis of superalloys The text of this new second edition has been completely revised and expanded with many new figures and tables added In developing this new edition the focus has been on providing comprehensive and practical coverage of superalloys technology Some highlights include the most complete and up to date presentation available on alloy melting Coverage of alloy selection provides many tips and guidelines that the reader can use in identifying an appropriate alloy for a specific application The relation of properties and microstructure is covered in more detail than in previous books
