Solid State Fermentation for Foods and Beverages Jian Chen,Yang Zhu,2013-11-23 Although one of the oldest microbial technologies used in food processing solid state fermentation SSF had until recently fallen out of favor However based on a series of established mathematical models new design concepts for SSF bioreactors and process control strategies have been proposed allowing SSF technology to reach new levels Solid State Fermentation for Foods and Beverages covers these new technologies and their application to food and beverage production The book systematically describes the production of solid state fermented food and beverage in terms of the history and development of SSF technology and SSF foods bio reactor design fermentation process various substrate origins and sustainable development It emphasizes Oriental traditional foods produced by SSF such as sufu vinegar soy sauce Chinese distilled spirit and rice wine The authors address such engineering issues as mass and heat transfer and energy equation calculation of solid state fermentation dynamic modeling of solid state fermentation and process control of solid state fermentation Covering the latest developments and achievements in the field of SSF the book provides a detailed introduction to various solid state fermented foods and beverages including product category characteristics functionalities safety issues and consumer perception It explores real advantages of SSF processes and how their application at real scale for high quality production that is more and less costly

Solid State Fermentation Susanne Steudler,Anett Werner,Jay J. Cheng,2019-07-16 This book reviews the wide range of products and applications of solid state fermentation as well as the development of this cultivation technology over the last years In this book readers will also learn about the challenges of solid state fermentation including process management reactor design scale up and the formation of process specific products Solid fermentation is a traditional cultivation technique of food technology and involves all cultivations of microorganisms on a solid substrate without free liquid phase In the course of development of Biotechnology it was replaced by liquid cultivation mainly in the western countries Over the past few years solid state fermentation is now becoming more important and has moved more back into focus Especially it is suitable for the cultivation of filamentous organisms like ascomycetes and basidiomycetes but also for various yeasts and bacteria The products and applications of solid state fermentation are as diverse as the microorganisms They range from enzyme production to the production of antibiotics and pigments to the use in

environmental technology and energy production **Solid-state Fermentation** Ashok Pandey,2003 Solid State Fermentation Technology and Its Applications Navodita Bhatnagar,2017-11 Provides an excellent introduction Solid State Fermentation SSF Technology and its applications widely used in manufacture of many commercially valuable compounds ranging from drugs cosmetic products enzymes dyes and so on It will be insightful for the readers and help them explore the interesting aspects of this latest but popular technology in depth Modern Solid State Fermentation Hongzhang Chen,2013-03-22 Modern Solid State Fermentation Theory and Practice covers state of the art studies in the field of solid state fermentation SSF In terms of different characteristics of microbial metabolites this book catalogs SSF into two main parts anaerobic and aerobic SSF Based on the principles of porous media and strategies of process control and scale up which are introduced in the book it not only presents a well founded explanation of essence of solid state fermentation but also their influence on microbial physiology In addition due to the rapid development of this field in recent years inert support solid state fermentation is also examined in detail At last the modern solid state fermentation technology platform is proposed which will be used in solid biomass bioconversion This book is intended for biochemists biotechnologists and process engineers as well as researchers interested in SSF Dr Hongzhang Chen is a Professor at Institute of Process Engineering Chinese Academy of Sciences Beijing China **Biotechnology Annual Review** M.R. Scientific Community I would like to express the wish that this International Symposium on SSF should be successful Solid State Fermentation is part of biotechnology research It consists on seeding solid culture medium with bacteria or fungi filamentous or higher and on producing in this medium solid components and exudates metabolites and high value products In fact this process is very old In older industries such the food and agricultural this technique has been extensively used An example of this is the production of pork sausages and Roquefort cheese Pharmaceutical industry could make extensive use of SSF in the production of secondary metabolites of many kinds and development in this direction is soon expected

Food Bioprocessing. Solid State Fermentation Patrick Kimuyu, 2017-12-12 Research Paper postgraduate from the year 2016 in the subject Medicine Public Health grade 1 Egerton University language English abstract For centuries fermentation has been extensively applied in the production of distinct substances that remain highly beneficial to industries and people with its increasing techniques gaining immense significance due to their environmental and economic benefits According to recent studies solid state fermentation is considered as the cheapest and environmentally responsive approach for the production of value added industrial products for example enzymes biofuels and even nutrient enriched animal feeds Solid state fermentation may be described as the growth and or cultivation of micro organisms under controlled conditions without the presence of free liquid for desired products development It is an ancient technique that utilizes solid substrates such as bagasse paper pulp and bran A key benefit of using such substrates is that waste substances that are rich in nutrients can be recycled as substrates and due to the slow and steady substrate utilization the substrate may be used for

long fermentation periods As a result this technique sustains controlled nutrients release Significantly solid state fermentation technique works best in techniques that involve fungi as well as micro organisms requiring less moisture content since the moisture required for the growth of microbes exists in absorbed states or in composite with solid matrix However even though this technique has diverse advantages especially compared with submerged fermentation technique there are certain processes in which SSF may not be used for example in bacterial fermentation or in processes that involve organisms requiring high water activity The main aim of this paper is thus describing solid state fermentation as a technique for the production of bioactive compounds
