Stratified Mappings - Structure and Triangulability A. Verona,2014-09-01 *Handbook of Geometry and Topology of Singularities I* José Luis Cisneros Molina,Dũng Tráng Lê,José Seade,2020-10-24 This volume consists of ten articles which provide an in depth and reader friendly survey of some of the foundational aspects of singularity theory Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways Singularities are ubiquitous in mathematics and science in general Singularity theory interacts energetically with the rest of mathematics acting as a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject This is the first volume in a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook **Diagram Cohomology and Isovariant Homotopy Theory** Giora Dula,Reinhard Schultz,1994 Obstruction theoretic methods are introduced into isovariant homotopy theory for a class of spaces with group actions the latter includes all smooth actions of cyclic groups of prime power order The central technical result is an equivalence between isovariant homotopy and specific equivariant homotopy theories for diagrams under suitable conditions This leads to isovariant Whitehead theorems an obstruction theoretic approach to isovariant homotopy theory with obstructions in cohomology groups of ordinary and equivalent diagrams and qualitative computations for rational homotopy groups of certain spaces of isovariant self maps of linear spheres The computations show that these homotopy groups are often far more complicated than the rational homotopy groups for the corresponding spaces of equivariant self maps Subsequent work will use these computations to construct new families of smooth actions on spheres that are topologically linear but differentiably nonlinear Harmonic Maps Between Riemannian Polyhedra James Eells,B. Fuglede,2001-07-30 Harmonic maps between smooth Riemannian manifolds play a ubiquitous role in differential geometry Examples include geodesics viewed as maps minimal surfaces holomorphic maps and Abelian integrals viewed as maps to a circle The theory of such maps has been extensively developed over the last 40 years and has significant applications throughout mathematics This 2001 book extends that theory in full detail to harmonic maps between broad classes of singular Riemannian polyhedra with many examples being given The analytical foundation is based on existence and regularity results which use the potential theory of Riemannian polyhedral domains viewed as Brelot harmonic spaces and geodesic space targets in the sense of Alexandrov and Busemann The work sets out much material on harmonic maps between singular spaces and will hence serve as a concise source for all researchers working in related fields

Stratified Mappings--structure and Triangulability Andrei Verona,1984 **Medial/Skeletal Linking Structures for Multi-Region Configurations** James Damon,Ellen Gasparovic,2018-01-16 The authors consider a generic configuration of regions consisting of a collection of distinct compact regions in which may be either regions with smooth boundaries disjoint from the others or regions which meet on their piecewise smooth boundaries in a generic way They introduce a skeletal linking structure for the collection of regions which simultaneously captures the regions individual shapes and geometric properties as well as the positional geometry of the collection The linking structure extends in a minimal way the individual skeletal structures on each of the regions This allows the authors to significantly extend the mathematical methods introduced for single regions to the configuration of regions Singularity Theory and its Applications David Mond,James Montaldi,2006-11-14 A workshop on Singularities Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are orginal research stimulated by the symposium and workshops All have been refereed and none will appear elsewhere The main topic deformation theory is represented by several papers on descriptions of the bases of versal deformations and several more on descriptions of the generic fibres Other topics include stratifications and applications to differential geometry *Extending Intersection Homology Type Invariants to Non-Witt Spaces* Markus Banagl,2002 Intersection homology theory provides a way to obtain generalized Poincare duality as well as a signature and characteristic classes for singular spaces For this to work one has had to assume however that the space satisfies the so called Witt condition We extend this approach to constructing invariants to spaces more general than Witt spaces **Essays on Topology** Louis Funar,Athanase Papadopoulos,2025-07-21 This book consists of a collection of articles dedicated to Valentin Po naru on topology and geometry in a broad sense Po naru is one of the leading mathematicians whose work had an essential impact on the development of topology in France over the last forty years of the twentieth century The special topics addressed in this volume include hyperbolic geometry 3 manifolds complex and symplectic geometry differential topology combinatorial group theory piecewise linear topology algebraic geometry knots and links homotopy theory braid groups phylogenetics the history of geometry and the philosophy of mathematics This collection of articles written by well known researchers provides a lively insight into a number of current research topics in geometry and topology

Equivariant Surgery Theories and Their Periodicity Properties Karl H. Dovermann,Reinhard Schultz,2006-11-14 The theory of surgery on manifolds has been generalized to categories of manifolds with group actions in several different ways This book discusses some basic properties that such theories have in common Special emphasis is placed on analogs of the fourfold periodicity theorems in ordinary surgery and the roles of standard general position hypotheses on the strata of manifolds with group actions The contents of the book presuppose some familiarity with the basic ideas of surgery theory and transformation groups but no previous knowledge of equivariant surgery is assumed The book is designed to serve either as an introduction to equivariant surgery theory for advanced graduate students and researchers in related areas or as an account of the authors previously unpublished work on periodicity for specialists in surgery theory or transformation groups Differential Topology, Foliations, and Group Actions Paul A. Schweitzer,1994 This volume contains the proceedings of the Workshop on Topology held at the Pontificia Universidade Catolica in Rio de Janeiro in January 1992 Bringing together about one hundred mathematicians from Brazil and around the world the workshop covered a variety of topics in differential and algebraic topology including group actions foliations low dimensional topology and connections to differential geometry The main concentration was on foliation theory but there was a lively exchange on other current topics in topology The volume contains an excellent list of open problems in foliation research prepared with the participation of some of the top world experts in this area Also presented here are two surveys on group actions finite group actions and rigidity theory for Anosov actions as well as an elementary survey of Thurston s geometric topology in dimensions 2 and 3 that would be accessible to advanced undergraduates and graduate students *The Geometry of Topological Stability* Andrew Du Plessis,Charles Terence Clegg Wall,1995-12-07 The aim of this book is to give necessary and sufficient conditions for aCToo map to be CTo stable the aim is achieved in a wide range of dimensions via a detailed study of the geometry and topology of many classes of generic singularities Written by internationally renowned authors the book describes original research virtually none of which has appeared before in either articles or in book form The methods developed will stimulate future progress from their application especially with regard to singularity theory **Stratifications, Singularities and Differential Equations** David Trotman,Leslie Charles Wilson,1997 **Extracta Mathematicae** ,2004 Surgery and Geometric Topology Andrew Ranicki,Masayuki Yamasaki,1997 Reviews in Complex Analysis, 1980-86 ,1989 **Singularity Theory and Its Applications** ,1991 Mathematical Reviews ,2003 Fundamenta Mathematicae ,2006 *Libertas Mathematica* ,1984
