Technology And National Competitiveness:

Technology and National Competitiveness Jorge Niosi, 1991-04-01 The first part of the collection reassesses and elaborates on Nobel Prize winner Wassily Leontief's input output model and makes use of Michael V Posner's technology gap trade theory to examine international trade and import export factor intensity The contributors clearly isolate technology as a crucial factor in the foreign commerce of Canada the US and other industrial nations The second part provides the theoretical background revealing the importance of the industrialized state's ability to affect international trade by implementing technology policy The third part analyses the role of government strategy in the development of technology in less industrialized nations faced with a fluctuating world economy and rapid technological change The fourth part re-evaluates Shumpeterian theory addressing the market determinants of technological change such as market structure corporate strategy and the size of corporations The contributors to this volume are Bernard Bonin Fran ois Chesnais Lester A Davis Christian DeBresson Giovanni Dosi Faye Duchin Philippe Faucher K E Hamilton Thomas Hatzichronoglou Lynn Krieger Mytelka Jorge Niosi Jacques Perrin and Luc Soete *Multinationals, Technology, and National Competitiveness* Marina Papanastassiou, Robert D. Pearce, 1999 Examines the effects of multinationals on the competitiveness of industry in the UK showing how these firms gain access to technology and questioning whether multinationals improve the potential and competitiveness of local industry Discusses theories of multinationals then examines what these theories imply for efficiency and welfare and looks at policies which affect multinationals Examines the role of multinationals in the UK and the role of decentralized research and development in multinationals Perspectives on U.S. Competitiveness in Science and Technology Titus Galama, James R. Hosek, 2007 Is the United States in danger of losing its competitive edge in science and technology S T In response to this concern the Under Secretary of Defense for Personnel and Readiness asked RAND to convene a meeting held on November 8 2006 to review evidence presented by experts from academia government and the private sector The papers presented at the meeting addressed a wide range of issues surrounding the United States current and future S T competitiveness including science policy the quantitative assessment of S T capability globalization the rise of Asia particularly China and India innovation trade technology diffusion the increase in foreign born S T students and workers in the United States new directions in the management and compensation of federal S T workers and national security and the defense industry These papers provide a partial survey of the facts challenges and questions posed by the potential erosion of U S S T capability The importance of S T to U S prosperity and security warrants that policymakers pay careful attention to the various high level reports issued over the past ve years that warn of pressures on the U S lead in S T The intellectual point of embarkation for the RAND meeting was the foremost recent such report *Rising Above the Gathering Storm Energizing and Employing America for a Brighter Economic Future* by the National Academy of Sciences **H.R. 820--The National Competitiveness Act of 1993** United States, United States. Competitiveness and Economic Growth Timo J. Hämäläinen,2003 The current paradigm shift in the world economy is challenging the traditional competitiveness and growth theories with their few explanatory variables This book offers a more holistic framework to synthesise the key findings of the various branches of competitiveness and growth research The author illustrates this framework with a new long wave theory of socio economic development This theory emphasises the competitiveness and growth benefits of rapid structural adjustment in the rapidly changing techno economic environment Based on thorough analysis the author argues that both markets and governments have become less efficient due to the current transformation of the world economy His empirical data from 22 OECD countries in the 1980s and 1990s illustrates that efficiency and growth oriented governments have significantly contributed to their countries economic success National Competitiveness and Economic Growth will furnish its readers with a better understanding of the interdependencies of many important but seemingly unrelated aspects of modern economies and societies for example the dynamics of business and technology and cultural and institutional change It will appeal to economists business professionals and policymakers with a special interest in the competitiveness and growth of firms and national economies as well as the long term development of socio economic systems **Industrial Competitiveness and Technological Advancement** Wendy H. Schacht,2006 There is ongoing interest in the pace of U S technological advancement due to its influence on U S economic growth productivity and international competitiveness Because technology can contribute to economic growth and productivity increases congressional attention has focused on how to augment private sector technological development Legislative activity over the past two decades has created a policy for technology development albeit an ad hoc one Because of the lack of consensus on the scope and direction of national policy Congress has taken an incremental approach aimed at creating new mechanisms to facilitate technological advancement in particular areas and making changes and improvements as necessary Congressional action has mandated specific technology development programs and obligations in federal agencies that did not initially support such efforts Many programs were created based upon what individual committees judged appropriate within the agencies over which they had authorization or appropriation responsibilities The use of line item funding for these activities including the Advanced Technology Program and the Manufacturing Extension Program of the National Institute of Standards and Technology as well as for the Undersecretary for Technology at the Department of Commerce is viewed by proponents as a way to ensure that the government encourages technological advance in the private sector Some legislative activity beginning in the 104th Congress has been directed at eliminating or significantly curtailing many of these federal

efforts Although this approach has not been adopted the budgets for several programs have declined Questions have been raised concerning the proper role of the federal government in technology development and the competitiveness of U S industry As the 110th Congress begins to develop its budget priorities how the government encourages technological progress in the private sector again may be explored and or redefined Government Technology Policy, Social Value, and National Competitiveness Frank Nagle,2019 This study seeks to better understand the impact that government technology procurement regulations have on social value and national competitiveness To do this it examines the impact of a change in France s technology procurement policy that required government agencies to favor open source software OSS over proprietary software in an attempt to reduce costs creating an unexpected demand shock for OSS Analysis using the rest of the EU as controls via difference in differences and synthetic control frameworks shows that this policy change led to an increase of nearly 600 000 OSS contributions per year from France creating social value by increasing the availability and quality of free and open source software Estimates indicate this would have cost paid software developers roughly 20 million per year to replicate However the open nature of such goods means that any country can reap the benefits of these efforts Therefore additional economic outcomes that enhance France s competitiveness are also considered The results show that within France the regulation led to a 0 6% 5 4% yearly increase in companies that use OSS a 9% 18% yearly increase in the number of IT related startups a 6 6% 14% yearly increase in the number of individuals employed in IT related jobs and a 5% 16% yearly decrease in software related patents All of these outcomes help to increase productivity and competitiveness at the national level In aggregate these results show that changes in government technology policy that favor OSS can have a positive impact on both global social value and domestic national competitiveness Perspectives on Technology and Industrial Competitiveness ,1986

Competitiveness Of Nations 3, The: Emerging Technologies In The Fourth Industrial Revolution Dong-sung Cho,Hwy-chang Moon,2024-05-17 In the existing reports on national competitiveness and rankings such as IMD World Competitiveness Yearbook and WEF Global Competitiveness Report there are sizable discrepancies in the ranking order for the same countries As a result the reader is often confused because such an outcome creates difficulties for government officials when translating these findings into real world policies These discrepancies are actually due to the differences in logic and analytical models used by IMD and WEF Therefore in recognizing the problems and limitations of these models this book presents the IPS model as a new approach As an extension of Michael Porter s diamond model it demonstrates a robust set of methodologies as well as offers a number of key policy implications for countries around the world that wish to enhance their national competitiveness The analytical tools used in this book can be further utilized for other units of analysis such as industries and firms As this book provides a series of sophisticated methodologies and specific guidelines for enhancing national competitiveness both academics and practitioners can derive useful implications from this research Alongside the theoretical frameworks and methodologies for national competitiveness

presented in this book the special theme and focus of this third volume is the fourth industrial revolution and the emerging technologies that are relevant to corporate and national competitiveness The discussion on the digitalization of business began as early as the 1990s but emerging technologies such as big data artificial intelligence and cloud computing have only been a recent trend Furthermore the COVID 19 pandemic has accelerated the adoption of emerging technologies by both firms and countries Yet despite the growing importance of emerging technologies firms and governments seem to be lagging in effectively integrating them into their operations To address these challenges this book explains how emerging technologies have affected firms industries and countries It also welcomes discussion on how firms and countries are responding to the changing environment to enhance their competitiveness through these new technologies
