Technology CAD Systems Franz Fasching, Stefan Halama, Siegfried Selberherr, 2012-12-06 As the cost of developing new semiconductor technology at ever higher bit gate densities continues to grow the value of using accurate TCAD simulation tools for design and development becomes more and more of a necessity to compete in today's business. The ability to tradeoff wafer starts in an advanced piloting facility for simulation analysis and optimization utilizing a virtual fab SW tool set is a clear economical asset for any semiconductor development company. Consequently development of more sophisticated accurate physics based and easy to use device and process modeling tools will receive continuing attention over the coming years. The cost of maintaining and paying for one's own internal modeling tool development effort however has caused many semiconductor development companies to consider replacing some or all of their internal tool development effort with the purchase of vendor modeling tools. While some notably larger companies have insisted on maintaining their own internal modeling tool development organization others have elected to depend totally on the tools offered by the TCAD vendors and have consequently reduced their modeling staffs to a bare minimal support function. Others are seeking to combine the best of their internally developed tool suite with robust proven tools provided by the vendors hoping to achieve a certain synergy as well as savings through this approach. In the following sections we describe IBM's internally developed suite of TCAD modeling tools and show several applications of the use of these tools.

Future Trends in Microelectronics S. Luryi, Jimmy Xu, Alex Zaslavsky, 2012-12-06 Silicon technology has developed along virtually one single line reducing the minimal size of lithographic features. But has this taken us to the point of diminishing returns. Are we now at a turning point in the logical

evolution of microelectronics Some believe that the semiconductor microelectronics industry has matured the research game is over comparisons with the steel industry are being made Others believe that qualitative progress in hardware technology will come roaring back based on innovative research This debate spirited as it is is reflected in the pages of Future Trends in Microelectronics where such questions are discussed What kind of research does the silicon industry need to continue its expansion What is the technical limit to shrinking Si devices Is there any economic sense in pursuing this limit What are the most attractive applications of optoelectronic hybrid systems Are there any green pastures beyond the traditional semiconductor technologies Identifying the scenario for the future evolution of microelectronics will present a tremendous opportunity for constructive action today

**High Performance Scientific and Engineering Computing** Hans-Joachim Bungartz, Franz Durst, Christoph Zenger, 2012-12-06 Since the creation of the term Scientific Computing and of its German counterpart Wissenschaftliches Rechnen whoever has to be blamed for that scientists from outside the field have been confused about the some what strange distinction between scientific and non scientific computations And the insiders i e those who are at least convinced of always computing in a very scientific way are far from being happy with this summary of their daily work even if further characterizations like High Performance or Engineering try to make things clearer usually with very modest success however Moreover to increase the unfortunate confusion of terms who knows the differences between Computational Science and Engineering as indicated in the title of the series these proceedings were given the honour to be published in and Scientific and Engineering Computing as chosen for the title of our book Actually though the protagonists of scientific computing persist in its independence as a scientific discipline and rightly so of course the ideas behind the term diverge wildly Consequently the variety of answers one can get to the question What is scientific computing is really impressive and ranges from the serious nothing else but numerical analysis up to the more mocking consuming as much CPU time as possible on the most powerful number crunchers
