The Evolutionary Roots of Human Brain Diseases Nico J. Diederich, Martin Brüne, Katrin Amunts, Christopher G. Goetz, Professor of Neurological Sciences and Pharmacology Christopher G Goetz, 2024 Traditionally studies and textbooks in Neurology or Psychiatry as well as allied disciplines deal with proximate causes of diseases and therapies but remain mute or minimally interested in their ultimate causes including the phylogeny and adaptive significance of disease manifestations Yet as clinicians or basic researchers we are conscious of potential evolutionary roots of neurological and psychiatric symptoms often offering a rudimentary explanation but never delving deeply into the current role of evolutionary science as it relates to health and disease We may miss appreciation of the role of adaptive properties evolutionarily based neuronal circuitries unbalanced cellular energy demands and the potential health consequences of residual syndromic behaviors that were possibly useful in early times of human development but presently are obsolete and pathological The problem is amplified because there is often no interdisciplinary dialogue between anthropology and evolutionary biology on one side and clinical sciences on the other side However the evolutionary tracing back of disease pathways may disclose unexpected insights and trigger the design of innovative research as well as propel the development of new therapeutic interventions There could also be a better apprehension of compensatory behaviors both at the cellular level as well as the systemic the behavioural levels that could be

the expected fruits of such collaborations So far scientists fall short in modeling the complexity of human social life human language or manual dexterity and mental or emotional behaviors that typify human neurological or psychological function and dysfunction Finally there remain obstacles in the form of poor animal modeling for human brain diseases and for human longevity The present book aims to fill these gaps by presenting an evolutionary view of neurological and psychiatric conditions that is meant to complement and enrich existing medical perspectives

The Lives of the Brain John S. Allen,2010-02-15 Though we have other distinguishing characteristics walking on two legs for instance and relative hairlessness the brain and the behavior it produces are what truly set us apart from the other apes and primates And how this three pound organ composed of water fat and protein turned a mammal species into the dominant animal on earth today is the story John S Allen seeks to tell Adopting what he calls a bottom up approach to the evolution of human behavior Allen considers the brain as a biological organ a collection of genes cells and tissues that grows eats and ages and is subject to the direct effects of natural selection and the phylogenetic constraints of its ancestry An exploration of the evolution of this critical organ based on recent work in paleoanthropology brain anatomy and neuroimaging molecular genetics life history theory and related fields his book shows us the brain as a product of the contexts in which it evolved phylogenetic somatic genetic ecological demographic and ultimately cultural linguistic Throughout Allen focuses on the foundations of brain evolution rather than the evolution of behavior or cognition This perspective demonstrates how just as some aspects of our behavior emerge in unexpected ways from the development of certain cognitive capacities a more nuanced understanding of behavioral evolution might develop from a clearer picture of brain evolution

Evolution of the Brain: Creation of the Self John C. Eccles,2005-07-05 Sir John Eccles a distinguished scientist and Nobel Prize winner who has devoted his scientific life to the study of the mammalian brain tells the story of how we came to be not only as animals at the end of the hominid evolutionary line but also as human persons possessed of reflective consciousness
