The Justification Of Scientific Change:

The Justification of Scientific Change C.R. Kordig, 2012-12-06 In this book I discuss the justification of scientific change and argue that it rests on different sorts of invariance Against this background I consider notions of observation meaning and regulative standards My position is in opposition to some widely influential and current views Revolutionary new ideas concerning the philosophy of science have recently been advanced by Feyerabend Hanson Kuhn Toulmin and others There are differences among their views and each in some respect differs from the others It is however not the differences but rather the similarities that are of primary concern to me here The claim that there are pervasive presuppositions fundamental to scientific investigations seems to be essential to the views of these men Each would further hold that transitions from one scientific tradition to another force radical changes in what is observed in the meanings of the terms employed and in the metastandards involved They would claim that total replacement not reduction is what does and should occur during scientific revolutions I argue that the proposed arguments for radical observational variance for radical meaning variance and for radical variance of regulative standards with respect to scientific transitions all fail I further argue that these positions are in themselves implausible and methodologically undesirable I sketch an account of the rationale of scientific change which preserves the merits and avoids the shortcomings of the approach of radical meaning variance theorists

The justification of scientific change Carl R. Kordig, 1971 [Science, Technology and Society](#) Wenceslao J. González, 2005 The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as

well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values cultural political economic of science and technology Wenceslao J Gonzalez is professor of logic and philosophy of science at the University of A Coru a Spain He has been vicedean of the School of Humanities and president of the Committee of Doctoral Programs at the University He has been a visting researcher at the Universities of St Andrews M nster and London London School of Economics as well as Visiting fellow at the Center for Philosophy of Science University of Pittsburgh He has given lectures at the Universities of Pittsburgh Stanford Quebec and Helsinki The conferences in which he has participated include those organized by the Universities of Uppsala New South Wales Bologne and Canterbury New Zealand He has edited 20 volumes and published 70 papers He is the editor of the monographic issues on Philosophy and Methodology of Economics 1998 and Lakatos s Philosophy Today 2001 His writings include Economic Prediction and Human Activity An Analysis of Prediction in Economics from Action Theory 1994 On the Theoretical Basis of Prediction in Economics 1996 Rationality in Economics and Scientific Predictions A Critical Reconstruction of Bounded Rationality and its Role in Economic Predictions 1997 Lakatos s Approach on Prediction and Novel Facts 2001 Rationality in Experimental Economics An Analysis of R Selten s Approach 2003 From Erkl renVerstehen to PredictionUnderstanding The Methodological Framework in Economics 2003 and The Many Faces of Popper s Methodological Approach to Prediction 2004 **The Philosophy of Science** Sahotra Sarkar, Jessica Pfeifer, 2006 The first in depth reference to the field that combines scientific knowledge with philosophical inquiry this encyclopedia brings together a team of leading scholars to provide nearly 150 entries on the essential concepts in the philosophy of science The areas covered include biology chemistry epistemology and metaphysics physics psychology and mind the social sciences and key figures in the combined studies of science and philosophy Midwest *Encyclopedia of Applied Ethics* ,2012-01-10 The Encyclopedia of Applied Ethics Second Edition Four Volume Set addresses both the physiological and the psychological aspects of human behavior Carefully crafted well written and thoroughly indexed the

The Journal of Philosophy, Psychology and Scientific Methods, 1915 Thomas Kuhn Juan V. Mayoral, 2025-09-22 This new biography of Thomas S Kuhn pays attention to the continuous development of his ideas Mayoral provides a comprehensive overview of Kuhn s life and work The book explores how Kuhn s theory develops from its beginnings at Harvard University in the early 1950s through the early 1990s at the MIT and also describes Kuhn s parallel lifetime Between those decades 1950s and 1990s Kuhn went through different academic institutions obtained a high status as a public intellectual and shifted from the history of science to the philosophy of science and back as his main research target All of this left a trace in his philosophical view of science enriching and changing it since his early training as a theoretical physicist In this book Kuhn is considered as an intellectual in evolution and his contributions are assessed against the backdrop of the different contexts that he traversed Therefore there shall not be a static figure of this intellectual as there shall not be a static figure of the surrounding intellectual contexts either At the same time however this book is planned so that each chapter provides the reader with a picture of a significant period in Kuhn s development and the main ideas that can be observed in it The book is useful for upper undergraduates in philosophy especially in philosophy of science in general history and history of science in the social sciences and other fields of humanities and for scientifically trained individuals interested in this author Kuhn scholars shall find this book useful for their studies on Kuhn insofar as new unpublished documents are employed new facts

about Kuhn's life are provided and a full interpretation of Kuhn's evolving system of philosophy of science is built and discussed
