Theory of Accumulation Nobuo Okishio, 2022-01-18 This book treats the mechanisms of growth and cycles in capitalist
economies in a unified manner incorporating a highly original macro dynamic theory based on Marxian micro foundations
and historical perspectives That theory was developed about 50 years ago by Nobuo Okishio 1927 2003 and included the
ideas of Keynes and Harrod In mainstream economics it used to be standard to analyse long term economic growth and
business cycles in different frameworks That approach has been changing recently but it still tends to be common to discuss
them separately At the outbreak of the global financial crisis of 2007 2008 and the prolonged stagnation that followed there
was strong criticism among policymakers and businesspeople that mainstream macroeconomics failed to provide convincing
explanations and effective policy recommendations This book offers an alternative perspective that responds to those
criticisms All these macroeconomic difficulties call for new wisdom beyond the limited neoclassical framework The sharp
wise thoughts of Okishio will add new tools for young researchers worldwide to meet the challenges of the current resource
misallocation the Great Recession and the Lost Decades problems Okishio proposes a historical perspective for the capitalist
system first He argues that production relations are conditioned by productive force The former should evolve as the latter
improves and the latter should evolve in order for human society to survive While reproduction is indispensable for the
economy to continue in any production relations it takes a specific form in capitalist economy He next shows that the
existence of profit requires the exploitation of the labourer This is called the Fundamental Marxian Theorem He also shows a
trade off relationship between the real wage rate and the profit rate In his theory the real wage rate is determined to clear
commodity markets in the short run as in the Keynesian theory while Marx believed that the real wage rate is given at
subsistence level or is influenced by the labour market Okishio attributes the origin of the business cycle to labourers under
consumption and private capitalists dispersive decision of accumulation The former is caused by exploitation and the latter is
based on the capitalist class s private ownership of the means of production Both are derived from the nature of the capitalist
economy He argues lastly that in the long term the development of productive force through the business cycle will
