Advances in Emotion Regulation: From Neuroscience to Psychotherapy Alessandro Grecucci, Remo Job, Jon J. Frederickson, 2017-08-24 Emotions are the gift nature gave us to help us connect with others Emotions do not come from out of nowhere Rather they are constantly generated usually by stimuli in our interpersonal world They bond us to others guide us in navigating our social interactions and help us care for each other Paraphrasing Shakespeare Our relationships are such stuff as emotions are made of Emotions express our needs and desires

When problems happen in our relationships emotions arise to help us fixing those problems However when emotions can become dysregulated pathology begins Almost all forms of psychopathology are associated with dysregulated emotions or dysregulatory mechanisms These dysregulated emotions can become regulated when the therapist helps clients express face and regulate their emotions and channel them into healthy actions This research topic gathers contributions from affective neuroscientists and psychotherapists to illustrate how our emotions become dysregulated in life and can become regulated through psychotherapy

Mariëlle Renssen,2003 **Attention and consciousness in different senses** Naotsugu Tsuchiya,Jeroen J. Van
Boxtel,2013-06-03 Although often used in everyday speech and in the scholarly literature selective attention and
consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship
between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow
researchers to control several of its aspects e g focused and feature based attention Consciousness as a scientific subject of
study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or
level of consciousness e g awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of
consciousness or the phenomenology of perception With the increase in consciousness focused research there is a
concomitant surge in research examining the relationship between attention and consciousness This relationship between
attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on
consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined
two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are
interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the
relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews
Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is
immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide
new and exciting evidence in the form of original contributions that may support any of the different views Even though
attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not
exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear
whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such
as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain
We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the
influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious
processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g
does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology
data pertaining to these questions Often one is caught in one s own research field and lacks the time or the knowledge to
delve into another field This Research Topic should provide a great overview in great breadth of the current state of
knowledge on the links between attention and consciousness and their interactions in several different sensory modalities
