Brown,2013-10-31 In 1543 Polish astronomer Nicolaus Copernicus challenged the view that the sun revolved around the earth arguing instead that the earth revolved around the sun His paper led to a revolution in thinking In Lester Brown s brilliant and invigorating account of the industrial economy he shows how a rethink of its fossil fuel based throwaway ethos is necessary to ensure that it works with not against the natural environment The issue now is whether the environment is part of the economy or the economy is part of the environment Brown argues the latter pointing out that treating the environment as part of the economy has produced an economy that is destroying its natural support systems One of the foremost experts on the new economic opportunities Brown shows the vast economic potential and environmental gains that exist from eliminating the waste and destruction of current consumption He describes how the global economy can be restructured to make it compatible with the earth s ecosystem so that economic progress can continue with high standards of living and secure employment for all while conserving resources and restoring the environment In the new economy wind farms replace coal mines hydrogen powered fuel cells replace internal combustion engines and cities are designed for people not cars Eco Economy is a map of how to get from here to there It is an essential guide to the economy of the 21st century and will be compelling reading for business readers and environmentalists alike looking for ways to build a better future *The New Production of Users* Sampsa Hyysalo,Torben Elgaard Jensen,Nelly Oudshoorn,2016-04-20 Behind the steady stream of new products technologies systems and services in our modern societies there is prolonged and complicated battle around the role of users How should designers get to know the users interests and needs Who should speak for the users How may designers collaborate with users and in what ways may users take innovation into their own hands The New Production of Users offers a rare overview of these issues It traces the history of designer user relations from the era of mass production to the present days Its focus lies in elaborating the currently emerging strategies

and approaches to user involvement in business and citizen contexts It analyses the challenges in the practical collaborations between designers and users and it investigates a number of cases where groups of users collectively took charge of innovation In addition to a number of new case studies the book provides a thorough account of theories of user involvement as well as and offers further developments to these theories As a part of this the book relates to the wide spectrum of fields currently associated with user involvement such as user centered design participatory design user innovation open source software cocreation and peer production Exploring the nexus between users and designers between efforts to democratize innovation and to mobilize users for commercial purposes this multi disciplinary book will be of great interest to academics policy makers and practitioners in fields such as Innovation Studies Innovation Policy Science and Technology Studies Cultural Studies Consumption studies Marketing e commerce Media Studies as well as Design research
