## Wind Up:

**Modern Anti-windup Synthesis** Luca Zaccarian, Andrew R. Teel, 2011-07-11 This book provides a wide variety of state space based numerical algorithms for the synthesis of feedback algorithms for linear systems with input saturation. Specifically it addresses and solves the anti windup problem presenting the objectives and terminology of the problem, the mathematical tools behind anti windup algorithms and more than twenty algorithms for anti windup synthesis illustrated with examples. Luca Zaccarian and Andrew Teel's modern method combining a state space approach with algorithms generated by solving linear matrix inequalities treats MIMO and SISO systems with equal ease. The book aimed at control engineers as well as graduate students ranges from very simple anti windup construction to sophisticated anti windup algorithms for nonlinear systems. Describes the fundamental objectives and principles behind anti windup synthesis for control systems with actuator saturation. Takes a modern state space approach to synthesis that applies to both SISO and MIMO systems. Presents algorithms as linear matrix inequalities that can be readily solved with widely available software. Explains mathematical concepts that motivate synthesis algorithms. Uses nonlinear performance curves to quantify performance relative to disturbances of varying magnitudes. Includes anti windup algorithms for a class of Euler Lagrange nonlinear systems. Traces the history of anti windup research through an extensive annotated bibliography.

*The Current Index*, 1908    **The Law Reports**, 1922    **Windup in Control** Peter Hippe, 2006-08-03 Actuator saturation is probably the most frequent nonlinearity encountered in control applications and causes controller windup and plant windup calling for distinct remedies. Peter Hippe presents antiwindup solutions for stable and unstable single input single output and multiple input multiple output MIMO systems. The solutions use only standard tools for the investigation of linear systems: state equations, transfer functions, etc. Less rigorous solutions which guarantee improved performance but without strict proof of stability are also demonstrated. Maintenance of MIMO system directionality and bumpless transfer are included and the developments in control methods are always supplemented by easily repeated numerical examples. Academics doing control related research and engineers working in the process industries will find this book an extremely useful overview of systematic windup prevention for all kinds of systems. It also has valuable insights to offer the graduate student of control.
