Strategy and Force Planning, Third Edition, Edited by Strategy and Force Planning Faculty, 2000 Naval War College (U.S.),2000* **Fundamentals of Force Planning** ,1990 Force Planning in an Era of Uncertainty John F. Troxell,1997 Colonel John F Troxell first asserts that there is a false dichotomy being drawn between capabilities based and threat based force planning He argues that post Cold War force planning must be founded on a logical integration of threat and capabilities based planning methodologies He then addresses the issue of the two Major Regional Contingency MRC force sizing paradigm After reviewing all the arguments made against that paradigm Colonel Troxell concludes that in a world characterized by uncertainty and regional instability in which the United States has global security interests and a unique leadership role the two MRC framework constitutes a logical scheme for organizing U S defense planning efforts That framework is also flexible enough to accommodate adjustments to the U S defense establishment both today and for the immediate future New approaches to planning scenarios and the operational concept for employing forces offer the potential for such adjustments concerning the ways of the strategic paradigm while force thinning and modernization are two important categories for adjusting the affordability of the strategic means At some point changes in the international security environment will demand significantly different approaches to shaping U S forces But given the QDR s ringing endorsement of the two MRC construct that change will be a 21st rather than a 20th century undertaking **A Composite Approach to Air Force Planning** Paul K. Davis,Zalmay Khalilzad,1996 After the 1996 Presidential election the Department of Defense DoD will probably conduct a major review of national military strategy and the current basis of force planning the Bottom Up Review In preparation for this review what issues should the Air Force consider what planning methods should be brought to bear and when The authors address these questions and note that there is no single best planning method Different methods

focus on and deal with different generic planning activities and no method stands alone or constitutes a complete methodology. If undertaken by creative minds most of the techniques discussed here will do a good job for the Air Force and for the DoD more generally. But it is particularly important to allow and encourage participants to break the shackles of conventional wisdom not only about current realities but about what the nature of the future will be about what good strategic planners are supposed to assume about the future and what types and levels of forces are allegedly required.

Strategy and Force Planning, Fourth Edition, 2004, * Naval War College (U.S.),2004* **Force Planning in an Era of Uncertainty** John F. Troxell,1997 **U.S. Strategic Force Planning** Kevin Neil Lewis,Rand Corporation,1982 Since the early 1970s the nuclear planning community has gradually come to agree that a strategy emphasizing the flexible and discriminate employment of nuclear weapons is probably the best way to make the U S deterrent more reliable and credible. However serious problems continue to undermine U S preparations for a strategy of flexible employment. Already tenuous the link between U S nuclear employment planning and force structure planning has been further weakened by strategic funding levels that have not been able to meet the demands that evolving U S strategy has placed on the posture. In this paper the author argues for a new planning approach to reconnect force and employment planning that would without absolute guidance about war aims enhance deterrence and permit more effective response in the event of nuclear war. This planning approach would 1 take realistic account of the strategic forces budget 2 consider the competitive effect of force planning on Soviet actions 3 be conducted over a long range horizon 4 have sufficient agility to keep the politics of strategic forces from excessively distorting the characteristics of specific programs and 5 use certain themes to shape force employment and acquisition decisions U.S. Army War College Guide to Strategy , **U.S. Army War College Guide to Strategy** Joseph R. Cerami,James F. Holcomb,2001 For more than 3 decades the U S Army War College USAWC Department of National Security and Strategy has faced the challenge of educating future strategic leaders on the subject of national security or grand strategy. Fitting at the top of an officer s or government official s career long professional development program this challenge has been to design a course on strategy that incorporates its many facets in a short period of time all within the 1 year senior service college curriculum. To do this a conceptual approach has provided the framework to think about strategy formulation. The purpose of this volume is to present the USAWC strategy formulation model to students and practitioners. This book serves as a guide to one method for the formulation analysis and study of strategy an approach which we have found to be useful in providing generations of strategists with the conceptual tools to think systematically strategically critically creatively and big. Balancing what is described in the chapters as ends ways and means remains at the core of the Army War College s approach to national security and military strategy and strategy formulation **Strategy and Force Planning** William W. Kaufmann,Army War College (U.S.),1993 Fundamentals of Force Planning: Defense planning cases Richmond M. Lloyd,1990 A Framework for Defense Planning Glenn A. Kent,1989 This report presents an approach to

strengthening the U S defense planning process The approach centers on a simple but rigorous framework that links official statements of national security and national military strategy and the operational capabilities of force elements to programs for developing and procuring military systems and services The author recommends adopting a force planning procedure that includes the following elements 1 an operational focus 2 guidance to Department of Defense components in operational terms 3 discussion at the level of force elements rather than systems and hardware 4 outlines of capability goals 5 allocation of resources to best overall effect 6 a better process for decisionmaking 7 streamlined process for upgrading basic systems 8 determination of performance features of new basic systems and 9 reduction of turmoil and paralysis
