New Technology Alessia Ceresa, 2009 From the second half of the the years 90s we are assisting to a progressive internationalisation of Terror ism through the diffusion on a large scale fo the New Technology as an essential component of our lives National and International Terroriorism in fact has found a great ally in technological instruments and in particular Internet since they guarantee a high level of anonymity and they represent new channels of communication essential to keep internal contacts among the members of a single terrorist organisation and they are fundamental instruments also to develop an international network of connections both for idelogogical support as well as for massive recruitment campaign New technology has also developed new and more aggressive technological weapons mass destruction armaments and CBRNE weapons used by the criminal terrorist organisations for creating new and alternative forms of blackmailing the International Institutions and the Civil Society These armaments are also considered a new source of raising funds for financing terrorism because of the illegal trade of toxic and nuclear material The time is mature for clarifying the concrete subversive capability of the several Terrorist movements that at a National Intentional level represents a menace to the global security in the light also of the fact that New Technology has progressively contributed in creating a world without spatial and temporal frontiers through Internet and the technological instruments This research also has the aim to develop a new program of prevention repression strategy against Terrorism in any form and idelogical identity to shorten the distance between the Terrorist phenomenon and the capability of the International Society to prevent and control this pathological problem using the same technological instruments exploited by Terrorism from an asymmetric war to a more and more symmetrical war where the battle field is the the Informational Technology

Terrorist Use of Cyberspace and Cyber Terrorism: New Challenges and Responses Mehmet Nesip Ogun, 2015-10-08 ICT plays a crucial role in the pursuit of modernization in the countries of Slovenia Croatia Albania and Bulgaria which form the South Eastern European SEE region The quest for Euro Atlantic integration and the undeniable necessity for direct foreign investment have encouraged the SEE countries to invest in the development of cyber technology and it has become the dominant area for social economic and political interaction within the region This has had both positive and negative consequences This book presents the proceedings of the NATO Advanced Training Course ATC held in Ohrid former Yugoslav Republic of Macedonia

in December 2014 The ATC addressed serious concerns about terrorist use of cyber technology in South Eastern Europe which not only has the potential to destabilize regional efforts to create a platform for increased development by creating a breeding ground for the training of extremists and the launching of cyber attacks but also represents a direct and indirect threat to the security and stability of other NATO partner countries The book will be of interest to all those involved in countering the threat posed by terrorist use of the Internet worldwide **Technology and Terrorism** Francis T.

Cullen,2017-07-05 In this volume thirteen authors from all points of the English speaking world provide a tour of the entwined labyrinths of technology and terrorism They describe terrorism as an epistemological contact sport With espionage one can often deduce from a few pieces of the puzzle a plan s goals and its roots its sources But the goals of terrorists are both vague and hopelessly specific while their means are restrained by rational institutional thought Thus terrorists can be equally expected to flail out without any thought at all as a child might exhibit in a temper tantrum and to be hyper rational probing at the edges of the target for any weakness Therefore how terrorists use technology may not be determined by any particular level of technology but in the probabilities for the target s expectation and defense regarding particular technologies Fred Allen asks why Bin Laden and his organization were effective against the Russians but may have more trouble with free societies Edward Tenner muses on the ironies of low tech attacks and the dangers of over reliance on high tech sophistication Such thoughts are tempered by direct and unreassuring reportage from the federal security front Ann Larabee turns the telescope around with a history showing that bomb throwing is as American as apple pie Toby Blyth takes us inside the theorists backroom for a look at the ever mutating ways means and motives of war It used to be about power money land resources or the ever popular Pamir Knot Great Game Now it seems that globalization has coughed up groups of people with little in common except for simultaneous feelings of helplessness and cultural superiority Modern technology which once seemed to hold only promise now seems to harbor the potential for danger and destruction The contributors to this volume are interested in the broader culture and how terrorism affects that culture including how people go about researching terrorism *Chemical and Biological Terrorism* Ronald G. Purver,1995 This report reviews the unclassified literature on chemical and biological terrorism in an attempt to ascertain the reality of this threat The first part covers the following issues considering biological and chemical agents in separate sections toxicity putative advantages of the chemical or biological weapon used factors or characteristics influencing their use likely types of agents used their acquisition and means of delivery incidents of past use or threat reasons why the agents would not be used current trends and likelihood of future use what kinds of terrorist groups would likely to use the agents and what can be done to defend against such use The third part discusses those same issues in an evaluation of the common elements or characteristics of chemical and biological agents A postscript reviews the use of chemical terrorism in the March 1995 Tokyo subway attack in which sarin nerve gas was released

Counter-Terrorism Technologies Peter Lehr,2018-07-10 This book critically discusses the role of

technology for counter terrorism in general and for securing our vulnerable open societies in particular It is set against the backdrop of the terrorist threat posed by the combined forces of Al Qaeda and ISIS Daesh in the foreseeable future The book commences by illuminating current and foreseeable tactics and weapons used by these implacable enemies weapons that may well include chemical biological radiological and potentially even nuclear CBRN devices In a second part it introduces technologies already available or in development that promise an increase in safety and security when it comes to the dangers posed by these terrorists This part also includes a critical discussion of advantages and disadvantages of such technologies that are quite often sold as a silver bullet approach in the fight against terrorism Controversies such as those triggered by the abuse of millimeter wave scanners deployed at several Western European airports will demonstrate that there are costs involved with regard to human rights The third analytical part takes the critical discussion further by arguing that the uncritical fielding of new surveillance and control technologies in parallel with the on going outsourcing and privatization of key services of the state could well lead to dystopias as envisaged in a rather prescient way by the so called cyperpunk novels of the 1980s The book concludes with the question that any liberal democracy should ask itself how far can we go with regard to hardening our societies against terrorist threats

Cyber Terrorism and Information Warfare: U.S. executive and congressional perspectives Yonah Alexander, Michael S. Swetnam, 1999 *Cyber Terrorism and Information Warfare* Dr M N Sirohi, 2015-06-01 Cyberterrorism is the convergence of cyberspace and terrorism It refers to unlawful attacks and threats of attacks against computers networks and the information stored therein when done to intimidate or coerce a government or its people in furtherance of political or social objectives Recently terrorist groups have been conducting more passive forms of information warfare It is reported that these terrorist groups are using the Internet to conduct their operations by employing email and file encryption and steganography as well as conducting web defacement attacks Information Warfare IW has been around since the dawn of war Information warfare has been and remains a critical element in deciding the outcome of military battles According to Denning Information warfare consists of those actions intended to protect exploit corrupt deny or destroy information or information resources in order to achieve a significant advantage objective or victory over an adversary This book discusses the nature and impact of cyber terrorism with the methods that have proven to be effective in law enforcement

Terrorism Robert A. Friedlander, Howard Sidney Levie, Donald J. Musch, Yonah Alexander, Douglas C. Lovelace (Jr.), 1979 An extensive collection of significant documents covering all major and minor issues and events regarding terrorism Government reports executive orders speeches court proceedings and position papers are presented in full text reprint Oceana Website **Responses to Cyber Terrorism** . Centre of Excellence - Defence Against Terrorism, Ankara, Turkey, 2008-02-28 The one issue touched on repeatedly by the contributors of this publication is the difficulty of arriving at a definition of cyber terrorism A NATO Office of Security document cautiously defines it as a cyber attack using or exploiting computer or communication networks to cause sufficient

destruction or disruption to generate fear or to intimidate a society into an ideological goal But the cyber world is surely remote from what is recognized as terrorism the bloody attacks and ethnic conflicts or more precisely the politically motivated intention to cause death or serious bodily harm to civilians or non combatants with the purpose of intimidating a population or compelling a government UN report Freedom from Fear 2005 It is hard to think of an instance when computer code has physically harmed anyone Yet a number of contributors show that exactly such events potentially on a huge scale can be expected For example attacks on critical infrastructure in particular on SCADA Supervisory Control and Data Acquisition systems which control physical processes in places like chemical factories dams and power stations A part of the publication examines cyber terrorism in the proper sense of the term and how to respond in terms of technology awareness and legal political measures However there is also the related question of responding to the terrorist presence on the Internet so called terrorist contents Here the Internet is not a weapon but an important tool for terrorists communications coordination training recruiting and information gathering on the targets of planned attacks

Terrorist use of the Internet has become a focus of media policy and scholarly attention in recent years Terrorists use the Internet in a variety of ways the most important being for propaganda purposes and operations related content but it is also potentially a means or target of attack This book presents revised versions of a selection of papers delivered at the NATO Advanced Research Workshop ARW on Terrorists Use of the Internet held in Dublin Ireland in June 2016 One aim of the workshop was to nurture dialogue between members of the academic policy and practitioner communities so the 60 delegates from 13 countries who attended the workshop included representatives from each of these The participants encompassed a wide range of expertise including engineering computer science law criminology political science international relations history and linguistics and the chapters contained herein reflect these diverse professional and disciplinary backgrounds The workshop also aimed to address the convergence of threats Following an introduction which provides an overview of the various ways in which terrorists use the Internet the book s remaining 25 chapters are grouped into 5 sections on cyber terrorism and critical infrastructure protection cyber enabled terrorist financing jihadi online propaganda online counterterrorism and innovative approaches and responses The book will be of interest to all those who need to maintain an awareness of the ways in which terrorists use the Internet and require an insight into how the threats posed by this use can be countered
