## **Teeth That Told:**

**The Tales Teeth Tell** Tanya M. Smith, 2018-10-23 What teeth can tell us about human evolution development and behavior Our teeth have intriguing stories to tell These sophisticated time machines record growth diet and evolutionary history as clearly as tree rings map a redwood s lifespan Each day of childhood is etched into tooth crowns and roots capturing birth nursing history environmental clues and illnesses The study of ancient fossilized teeth sheds light on how our ancestors grew up how we evolved and how prehistoric cultural transitions continue to affect humans today In *The Tales Teeth Tell* biological anthropologist Tanya Smith offers an engaging and surprising look at what teeth tell us about the evolution of primates including our own uniqueness Humans impressive set of varied teeth provides a multipurpose toolkit honed by the diet choices of our mammalian ancestors Fossil teeth highly resilient because of their substantial mineral content are all that is left of some long extinct species Smith explains how researchers employ painstaking techniques to coax microscopic secrets from these enigmatic remains Counting tiny daily lines provides a way to estimate age that is more powerful than any other forensic technique Dental plaque so carefully removed by dental hygienists today records our ancestors behavior and health in the form of fossilized food particles and bacteria including their DNA Smith also traces the grisly origins of dentistry reveals that the urge to pick one s teeth is not unique to humans and illuminates the age old pursuit of dental art The book is generously illustrated with original photographs many in color [Teeth Tell Tales](#) Hayley L. Mickleburgh, 2008-12 Similar to the osteological study of prehistoric human remains the study of human dental wear has been proven to afford a wealth of information on human cultural practices This study is aimed at recording and understanding the dental wear patterns in human dentitions from the Caribbean archaeological sites of Anse la Gourde located on the most eastern point of Guadeloupe and Tutu located on the small island of St Thomas U S Virgin Islands The premise of this research is the assumption that dental wear patterns are informative of a great many aspects of human health and lifestyle The use of the mouth and teeth in both masticatory and non masticatory activities is assumed to leave traces which can be studied post mortem to infer the lifestyle linked to such activities In order to build a complete picture of these activities and the lifestyle linked to the dental wear patterns other lines of evidence are also followed here such as ethnohistoric and ethnographical accounts and evidence from modern dentistry Using this combination of different lines of evidence it has been possible to characterize the diet and a range of cultural practices of the inhabitants at each site The individuals selected in this sample very actively engaged their teeth in many non masticatory culturally defined activities which put their dentitions under a great deal of stress It seems these people s use of their mouths and teeth in this way was a very conscious decision characterized by their cultural background **The Northwestern Dental Journal** ,1912
