The Epstein Barr Virus:

The Epstein-Barr Virus M. A. Epstein, B. G. Achong, 2012-12-06 The Epstein Barr virus was discovered 15 years ago Since that time an immense body of information has been accumulated on this agent which has come to assume great significance in many different fields of biological science Thus the virus has very special relevance in human medicine and oncology in tumor virology in immunology and in molecular virology since it is the cause of infectious mononucleosis and also the first human cancer virus etiologically related to endemic Burkitt's lymphoma and probably to nasopharyngeal carcinoma In addition continuous human lymphoid cell lines initiated and maintained by the transforming function of the virus genome provide a laboratory tool with wide and ever growing applications Innumerable papers on the Epstein Barr virus have appeared over recent years and reports of work with this agent now constitute a veritable flood The present book provides the first and only comprehensive authoritative overview of all aspects of the virus by authors who have been the original and major contributors in their particular disciplines A complete and up to date survey of this unique and important agent is thus provided which should be of great interest to experts teachers and students engaged in cancer research virology immunology molecular biology epidemiology and cell culture Where topics have been dealt with from more than one of these viewpoints some inevitable overlap and duplication has resulted although this has been kept to a minimum it has been retained in some places because of positive usefulness

Cancer Virus Dorothy H. Crawford, Ingólfur Johannessen, Alan B. Rickinson, 2014-02-27 The Epstein Barr virus EBV was discovered in 1964 At the time the very idea of a virus underlying a cancer was revolutionary Cancer is after all not catching Even now the idea of a virus causing cancer surprises many people But Epstein Barr named after its discoverers Sir Anthony Epstein and Dr Yvonne Barr is fascinating for other reasons too Almost everyone carries it yet it is only under certain circumstances that it produces disease It has been associated with different apparently unrelated diseases in different populations Burkitt's Lymphoma producing tumours in the jaw in African children a nasal tumour in China glandular fever in Europe and the USA and the majority of cases of Hodgkin's Disease everywhere This book tells the story of the discovery of the virus and the recognition of its connection with these various diseases an account that spans the world and involves some remarkable characters and individual stories

Epstein-Barr Virus and Human Disease P. H. Levine, D. V. Ablashi, M. Nonoyama, G. R. Pearson, R. Glaser, 2012-12-06 Since its discovery as the cause of infectious mononucleosis in 1964 the Epstein Barr virus EBV has been etiologically implicated in an increasing number of human diseases Generally considered the first human oncogenic virus because of a number of studies linking it with Burkitt's lymphoma and nasopharyngeal carcinoma NPC as well as its documented oncogenicity in nonhuman primates EBV has served as a model for identifying subsequent candidate oncogenic viruses and the stimulus for Evans' revision of the Henle Koch postulates to accommodate the problems in proving viral oncogenicity in humans Research on the role of EBV in human cancer was particularly enhanced by the pioneering work of Werner and Gertrude Henle and by

the coordinated efforts of the Special Virus Leukemia Program and its successors the Special Virus Cancer Program and the Virus Cancer Program of the National Cancer Institute NCI Initiated by Dr Frank J Rauscher who subsequently became director of the NCI and is now Vice President of the American Cancer Society and expanded by Dr John B Moloney whose contributions to cancer research were honored at this Second International Symposium on EBV and Associated Malignant Diseases these NCI contract supported programs brought together investigators from all over the world to participate in a joint effort to unravel the mystery of EBV behavior and pathogenicity It was these programs that gave us the opportunity to work with such outstanding people as Professor Yohei Ito to whom this book is dedicated

Epstein Barr Virus Volume 2 Christian Münz, 2015-10-01 Epstein Barr virus EBV was discovered as the first human tumor virus around 50 years ago Since its discovery in Burkitt's lymphoma it has been associated with various other malignancies infectious mononucleosis and even autoimmune diseases The two book volumes on EBV summarize the first 50 years of research on this tumor virus starting with historical perspectives on discovery oncogenicity and immune control reviewing the role that the virus plays in the various associated diseases and concluding with a discussion on how the immune system keeps persistent EBV infection under control in healthy EBV carriers and can be used to treat EBV associated diseases The respective 32 chapters are written by international experts from three continents for health care providers biomedical researchers and patients that are affected by EBV The assembled knowledge should help to understand EBV associated diseases better and to develop EBV specific vaccination in the near future

Epstein-Barr Virus and Kaposi's Sarcoma Herpesvirus/human Herpesvirus 8 IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, International Agency for Research on Cancer, 1997 Presents the results of an expert evaluation of the carcinogenic risk to humans posed by infection with two lymphotropic herpesviruses Epstein Barr virus and Kaposi's sarcoma herpesvirus human herpesvirus 8 a new human herpesvirus detected in 1994 in Kaposi's sarcoma associated with AIDS The viruses are evaluated in separate monographs which consider the biology of the virus the epidemiology of infections related animal viruses and mechanistic studies in addition to abundant studies of cancer in humans

Epstein-Barr Virus and Human Disease • 1988 D. V. Ablashi, A. Faggioni, G. R. F. Krueger, J. S. Pagano, G. R. Pearson, 2012-12-06 Epstein Barr virus EBV is one of the most widespread human viruses with over 80% of the general population exposed by young adulthood as determined by antibody studies Initial infection usually occurs during childhood or the teenage years It is clear that depending on the age of the recipient clinical manifestations of the primary infection can vary It has been known for 20 years that EBV is the etiologic agent of acute infectious mononucleosis IM and is also closely associated with African Burkitt's lymphoma BL and nasopharyngeal carcinoma NPC There is increasing evidence that EBV is a factor in the etiology of B cell lymphomas which arise at a high frequency in immunodeficient populations EBV may also contribute to the development

of autoimmune disease Thus this virus continues to attract world wide attention The major target cell for EBV infection has now been conclusively identified as the complement receptor type 2 CR2 the Cd Cd₃₃ receptor on B lymphocyte It is apparent however that other cells also can become infected by EBV such as epithelial cells in the parotid gland and other epithelial cells in the upper respiratory tract This might help account for the EBV associated carcinomas of the upper respiratory tract The first in a series of international symposia on EBV associated diseases focused primarily on Burkitt's type lymphomas or on NPC Kyoto 1977 Dusseldorf 1980 Kuala Lumpur 1982 and emphasized mainly the clinical elements of these diseases Subsequent symposia Loutraki 1984 St *Development of Epstein-Barr Virus Vaccines* Andrew J. Morgan, 1995 This book is about the development of the Epstein Barr virus vaccine which may ultimately eliminate or reduce the incidence of the cancers associated with this virus in humans These include nasopharyngeal carcinoma endemic Burkitt's lymphoma and certain lymphomas which occur with a relatively high frequency in immunosuppressed patients and AIDS sufferers Such vaccines may also be deployed in the prevention of infectious mononucleosis a disease which although rarely fatal has a significant social and economic impact on the young adult population in the Western World Several candidate vaccines based on recombinant viral envelope glycoproteins and a range of viral vectors have been evaluated in a primate animal model of lymphoma induced by the virus

Epstein-Barr Virus and Human Cancer K. Takada, 2012-12-06 In this book outstanding researchers from the US and Japan review recent progress in Epstein Barr virus research Most people carry EBV in memory B cells in a latent stage Many malignancies such as T NK cell lymphoma AIDS associated B cell lymphoma gastric carcinoma and Hodgkin's disease have been causally linked to EBV The development of molecular biology technique has allowed us to study the roles of individual EBV genes that act in the maintenance and disruption of EBV latency

Epstein-Barr Virus and Human Disease • 1990 D. V. Ablashi, A. T. Huang, J. S. Pagano, G. R. Pearson, C. S. Yang, 2012-12-06 The Epstein Barr virus EBV isolated in 1966 continues to draw worldwide attention as an important human pathogen Its importance is largely related to the continuing accumulation of evidence that implicates EBV as an etiological factor for certain types of human cancer More recent investigations on this virus have focused on the identity of the viral genes responsible for the different disease manifestations observed following viral infection It is hoped that by thorough investigation of this virus clues to how cancer develops from a normal cell will surface In addition many of the gene products are now being exploited for the development of new and more sensitive tests for the diagnosis and clinical management of individuals with EBV associated diseases Thus studies on this virus continue to provide new information of importance to our understanding of the malignant process In an effort to attract both basic and clinical scientists to the same meeting for purposes of scientific exchange and fostering a closer interaction between these individuals a series of international symposia was initiated in 1984 The first meeting was held in Loutraki Greece and was attended by approximately 100 participants The second international symposium was held in St Petersburg Florida in 1986 and was attended by approximately twice as many participants as

attended the Loutraki meeting **Epstein-Barr Virus (EBV)**, 1997 **Epstein-Barr Virus** Alex Tselis, Hal B. Jenson, 2006-03-08 Filling a gap in the literature this guide analyzes EBV infection and all of its associated disorders including infectious mononucleosis Burkitt lymphoma and Hodgkin's disease Opening with a historical introduction the reference progresses from molecular virology epidemiology immunology and pathology to clinical presentation diagnosis and treatment **Epstein Barr Virus Volume 1** Christian Münz, 2016-08-23 Epstein Barr virus EBV was discovered as the first human tumor virus around 50 years ago Since its discovery in Burkitt's lymphoma it has been associated with various other malignancies infectious mononucleosis and even autoimmune diseases The two book volumes on EBV summarize the first 50 years of research on this tumor virus starting with historical perspectives on discovery oncogenicity and immune control reviewing the role that the virus plays in the various associated diseases and concluding with a discussion on how the immune system keeps persistent EBV infection under control in healthy EBV carriers and can be used to treat EBV associated diseases The respective 32 chapters are written by international experts from three continents for health care providers biomedical researchers and patients that are affected by EBV The assembled knowledge should help to understand EBV associated diseases better and to develop EBV specific vaccination in the near future **New Developments in Epstein-Barr Virus Research** Constantine S. Umar, 2006 Epstein Barr virus frequently referred to as EBV is a member of the herpes virus family and one of the most common human viruses The virus occurs world wide and most people become infected with EBV sometime during their lives In the United States as many as 95 per cent of adults between 35 and 40 years of age have been infected Infants become susceptible to EBV as soon as maternal antibody protection present at birth disappears Many children become infected with EBV and these infections usually cause no symptoms or are indistinguishable from the other mild brief illnesses of childhood In the United States and in other developed countries many persons are not infected with EBV in their childhood years When infection with EBV occurs during adolescence or young adulthood it causes infectious mononucleosis 35 per cent to 50 per cent of the time EBV also establishes a lifelong dormant infection in some cells of the body's immune system A late event in a very few carriers of this virus is the emergence of Burkitt's lymphoma and nasopharyngeal carcinoma This new book presents leading research from around the world in this field

Characterization of the Domains of LMP-1 of Epstein-Barr Virus Mark L. Sandberg, 1999 **Characterization of the Establishment of Epstein-Barr Virus' Plasmid Replicon** Elizabeth Rottjakob Leight, 2001 **Epstein-Barr Virus and Human Disease · 1990** D. V. Ablashi, A. T. Huang, J. S. Pagano, G. R. Pearson, C. S. Yang, 1991-11-11 The Epstein Barr virus EBV isolated in 1966 continues to draw worldwide attention as an important human pathogen Its importance is largely related to the continuing accumulation of evidence that implicates EBV as an etiological factor for certain types of human cancer More recent investigations on this virus have focused on the identity of the viral genes responsible for the different disease manifestations observed following viral infection It is hoped that by thorough investigation of this virus clues to how

cancer develops from a normal cell will surface In addition many of the gene products are now being exploited for the development of new and more sensitive tests for the diagnosis and clinical management of individuals with EBV associated diseases Thus studies on this virus continue to provide new information of importance to our understanding of the malignant process In an effort to attract both basic and clinical scientists to the same meeting for purposes of scientific exchange and fostering a closer interaction between these individuals a series of international symposia was initiated in 1984 The first meeting was held in Loutraki Greece and was attended by approximately 100 participants The second international symposium was held in St Petersburg Florida in 1986 and was attended by approximately twice as many participants as attended the Loutraki meeting

Epstein-Barr Virus Protocols Joanna B. Wilson, Gerhard H. W. May,2001-03-23 Joanna Wilson and Gerhard May have assembled a collection of the key molecular biology protocols used in the analysis of Epstein Barr virus EBV along with a series of valuable immunology cell biology and transgenic mouse protocols These readily reproducible techniques include methods for gene expression with mini EBV plasmids for expression analysis by FISH for EBV detection and quantitation and for cell proliferation and death assays In addition there are EBV based vectors an up to date map of EBV a comprehensive table of available latent protein antisera and assays from in vitro to cell to organ to organism levels Timely and highly practical Epstein Barr Virus Protocols provides powerful tools for elucidating the life cycle of EBV and its host interactions work that promises the emergence of major new treatments and cures for EBV associated diseases including several forms of human cancer
