The Making Of Statisticians:

The Making of Statisticians J. Gani, 2012-12-06 Like many other scientists I have long been interested in history I enjoy reading about the minutiae of its daily unfolding the coinage food clothes games literature and habits which characterize a people I am carried away by the broad sweep of its major events the wars famines migrations reforms political swings and scientific advances which shape a society I know that historians value autobiographical accounts as part of the basic material from which the stuff of history is distilled this should apply no less to statistical than to political or social history Modern statistics is a relatively young science it was while pondering this fact sometime in 1980 that I realized that many of the pioneers of our field could still be called upon to tell their stories If however biographical material about these eminent statisticians was not gathered then one might lose the chance to gain insight into the origins of many an important statistical development The remarkable experience of these colleagues could not be readily duplicated Fired by these thoughts I took it upon myself to plan the framework of this book In it eminent statisticians probabilists are included under this title would be invited to sketch their lives explain how they had become interested in probability and statistics give an account of their major contributions and possibly hazard some predictions about the future of the subject

Office of Commissioner of Labor, 1907 **Abstract of Foreign Labour Statistics**, 1899 **Statistics for Making Decisions** Nicholas T. Longford, 2021-03-29 Making decisions is a ubiquitous mental activity in our private and professional or public lives It entails choosing one course of action from an available shortlist of options Statistics for Making Decisions places decision making at the centre of statistical inference proposing its theory as a new paradigm for statistical practice The analysis in this paradigm is earnest about prior information and the consequences of the various kinds of errors that may be committed Its conclusion is a course of action tailored to the perspective of the specific client or sponsor of the analysis The author's intention is a wholesale replacement of hypothesis testing indicting it with the argument that it has no means of incorporating the consequences of errors which self evidently matter to the client The volume appeals to the analyst who deals with the simplest statistical problems of comparing two samples which one has a greater mean or variance or deciding whether a parameter is positive or negative It combines

highlighting the deficiencies of hypothesis testing with promoting a principled solution based on the idea of a currency for error of which we want to spend as little as possible This is implemented by selecting the option for which the expected loss is smallest the Bayes rule The price to pay is the need for a more detailed description of the options and eliciting and quantifying the consequences ramifications of the errors This is what our clients do informally and often inexpertly after receiving outputs of the analysis in an established format such as the verdict of a hypothesis test or an estimate and its standard error As a scientific discipline and profession statistics has a potential to do this much better and deliver to the client a more complete and more relevant product Nicholas T Longford is a senior statistician at Imperial College London specialising in statistical methods for neonatal medicine His interests include causal analysis of observational studies decision theory and the contest of modelling and design in data analysis His longer term appointments in the past include Educational Testing Service Princeton NJ USA de Montfort University Leicester England and directorship of SNTL a statistics research and consulting company He is the author of over 100 journal articles and six other monographs on a variety of topics in applied statistics
