

COLOUR THEORY

CMYK

Cyan, Magenta, Yellow, Black
Created with ink.
When we mix colours using paint, or through the printing process, we are using subtractive colour methods. Subtractive colour mixing means that you begin with white and ends with black, as you subtractor the result gets darker and tends to black.

RGB

Red, Green, Blue
Created with light.
If we are looking at a computer, the colours we see on the screen are created with light using the additive colour method. Additive colour mixing begins with black and ends with white, as more colour is added, the result is lighter and tends to white.

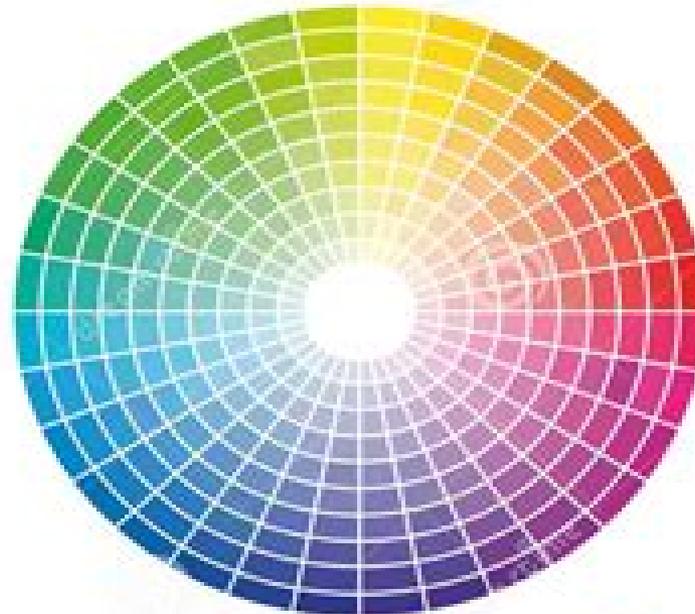

Gray Scale

Black and white only intensity of black.

Theory Of Colours:

Goethe's Theory of Colours Charles Lock Eastlake, 2020-07-27
Reproduction of the original Goethe's Theory of Colours by Charles Lock Eastlake
Theory of Colours Johann Wolfgang von Goethe, 2015-07-19
Theory of Colours is a book by Johann Wolfgang von Goethe about the poet's views on the nature of colours and how these are perceived by humans
Published in 1810 it contains detailed descriptions of phenomena such as coloured shadows refraction and chromatic aberration
The work originated in Goethe's occupation with painting and mainly exerted an influence onto the arts Philipp Otto Runge J M W Turner the Pre Raphaelites Wassily Kandinsky
Although Goethe's work was rejected by physicists a number of philosophers and physicists have concerned themselves with it including Thomas Johann Seebeck Arthur Schopenhauer see *On Vision and Colors* Hermann von Helmholtz Rudolf Steiner Ludwig Wittgenstein Werner Heisenberg Kurt Godel and Mitchell Feigenbaum
Goethe's book provides a catalogue of how colour is perceived in a wide variety of circumstances and considers Isaac Newton's observations to be special cases
Unlike Newton Goethe's concern was not so much with the analytic treatment of colour as with the qualities of how phenomena are perceived
Philosophers have come to understand the distinction between the optical spectrum as observed by Newton and the phenomenon of human colour perception as presented by Goethe a subject analyzed at length by Wittgenstein in his exegesis of Goethe in *Remarks on Colour*

Goethe's Theory of Colours Johann Wolfgang von Goethe, 1840
Goethe's Theory of Colours ..., 1970
Goethe's Theory of Colours Johann Wolfgang von Goethe, 1840
This work by Johann Wolfgang von Goethe 1749-1832 was translated into English in 1840 by Sir Charles Eastlake
1793-1865 painter and later keeper of the National Gallery
Goethe's 1810 work was rejected by many contemporary scientists because it appeared to contradict the physical laws laid down by Newton
However its focus on the human perception of the colour spectrum as opposed to the observable optical phenomenon was attractive to and influential upon artists and philosophers
As Eastlake says in his preface the work's dismissal on scientific grounds had caused a well arranged mass of observations and experiments many of which are important and interesting to be overlooked
Eastlake also puts Goethe's work into its aesthetic and scientific context and describes its original reception
His clear translation of Goethe's observations and experiments on colour and light will appeal to anyone interested in our responses to art
