

Wind And Trees

Donald P. Hanley

Wind And Trees:

Wind and Trees M. P. Coutts, J. Grace, 1995 Winds over topography and inside forests produce mechanical reactions in trees and eventually failure in stems and roots when stressed by storms The mechanics of these reactions and the physiological responses to wind in leaves stems and root systems and the important ecological consequences of wind throw are described in this book Management techniques of forests in windy climates are detailed including the use of models predicting risk of wind damage It is clear that the whole field of wind effects on trees has benefited from recent multi disciplinary research and significant advances in knowledge of most parts of the subject have been made in the last decade This book brings the up to date theories methodologies and results together and gives the reader a sense of coherence in this complex but fascinating field

The Wind and the Trees Todd Stewart (Illustrator), 2021 This picture book takes place in the serenity of a forest as a new pine seedling strikes up a conversation with a nearby older tree that will last for many years Each beautifully illustrated spread shows the two trees one on each side as they discuss the wind the younger tree learning from the experiences of the older Wind feels good but it stretches trees and dries them out It also makes trees dig in and build strength Wind scatters seeds and it carries messages and signals to other trees in the forest As time passes the younger tree becomes visibly larger fuller and more robust as the older tree thins and droops needles stripped away until it is little more than a trunk when a fierce storm blows through and takes it down clearing old growth to make room for new The story ends with the younger tree now mature greeting a seedling that floats in on the wind taking root in the old tree's spot in the forest Gorgeous multilayered screen prints show the trees in a wide variety of unexpected lights and colours different on every spread to reflect changing seasons weather moods life stages and more in this beautiful textured art On one level the story sweetly honors intergenerational relationships highlighting the value both trees have to offer such as wisdom nurturing and mentoring on the part of the elder tree and enthusiasm physical strength and passing on knowledge by the younger On another level this is a moving lyrical story about the circle of life and as such it offers a starting point for discussions about life loss and growing up to care for others as our elders did for us The story also hints at recent research into tree communication which postulates that trees are more social and sophisticated than previously thought It also subtly encourages environmental stewardship which is timely in this era of devastating forest fires amidst global warming and climate change

Edmund Beckett Baron Grimthorpe, 1876 **Wind Damage to Trees**, PageWise Inc presents the full text of the article Wind Damage to Trees an excerpt from the textbook A Year in the Wonderland of Trees by Hallan Hawksworth and Francis B Atkinson that was published in the 1920s The book was written to educate children on the importance of trees and the environment When the body of a tree a branch or a twig is bent by the wind sap cells are compressed on one side and stretched on the other This causes an extra supply of sap to be pumped to these points of strain which results in the tree

growing larger and stronger at these points The article also discusses the importance of strong roots during strong winds
