security framework for nature inspired algorithms and uses the wisdom of the hive for routing in ad hoc and sensor networks Finally the author provides a comprehensive bibliography to serve as a reference for nature inspired solutions to networking problems This book bridges the gap between natural computing and computer networking What sets this book apart from other texts on this subject is its natural engineering approach in which the challenges and objectives of a real world system are identified before its solution nature inspired or otherwise is discussed This balanced exposition of the book makes it equally suitable for telecommunication network designers and theorists and computer science researchers engaged with artificial intelligence agents and nature inspired techniques
