The tools of mathematical statistics find wide application in climatological research. Indeed, climatology is, to a large degree, the study of the statistics of our climate. Mathematical statistics provides powerful tools which are invaluable for this pursuit. Applications range from simple uses of sampling distributions to provide estimates of the uncertainty of a climatological mean to sophisticated statistical methodologies which form the basis of diagnostic calculations designed to reveal the dynamics of the climate system. However, even the simplest of statistical tools has limitations and pitfalls which may cause the climatologist to draw false conclusions from his or her data if the tools are used inappropriately and without a proper understanding of their conceptual foundations. The purpose of this book is to help the climatologist understand the basic precepts of the statistician's art and to provide some of the background which is needed to apply statistical methodology correctly and usefully.

Statistical Analysis In Climate Research:

Statistical Analysis in Climate Research Hans von Storch, Francis W. Zwiers, 1999-07-15 Climatology is to a large degree the study of the statistics of our climate The powerful tools of mathematical statistics therefore find wide application in climatological research The purpose of this book is to help the climatologist understand the basic precepts of the statistician's art and to provide some of the background needed to apply statistical methodology correctly and usefully The book is self contained introductory material standard advanced techniques and the specialised techniques used specifically by climatologists are all contained within this one source There are a wealth of real world examples drawn from the climate literature to demonstrate the need power and pitfalls of statistical analysis in climate research Suitable for graduate courses on statistics for climatic atmospheric and oceanic science this book will also be valuable as a reference source for researchers in climatology meteorology atmospheric science and oceanography

Statistical Analysis in Climate Research Hans von Storch, Francis W. Zwiers, 1998

Statistical Analysis of Climate Series Helmut Pruscha, 2012-10-30 The book presents the application of statistical methods to climatological data on temperature and precipitation It provides specific techniques for treating series of yearly monthly and daily records The results potential relevance in the climate context is discussed The methodical tools are taken from time series analysis from periodogram and wavelet analysis from correlation and principal component analysis and from categorical data and event time analysis The applied models are among others the ARIMA and GARCH model and inhomogeneous Poisson processes Further we deal with a number of special statistical topics e g the problem of trend season and autocorrelation adjustment and with simultaneous statistical inference Programs in R and data sets on climate series provided at the author's homepage enable readers statisticians meteorologists other natural scientists to perform their own exercises and discover their own applications

Analysis of Climate Variability H. von Storch, A. Navarra, 1999-10-20 Various problems in climate research which require the use of advanced statistical techniques are considered in this book The examples emphasize the notion that the knowledge of statistical techniques alone is not sufficient Good physical understanding of the specific problems in climate research is needed to guide the researcher in choosing the right approach to obtain meaningful answers The second edition of this book originally based on contributions given during a school sponsored by the European Union on the Italian island of Elba continues to be based on these general principles The general outline has been kept the same covering aspects such as the examination of the observational record stochastic climate models analytical techniques e g EOF teleconnections and so on but the chapters have been revised and updated in some cases extensively to cover the advances in the field in the years since the first edition

Statistical Analysis of Climate Extremes Manfred Mudelsee, 2020-05-14 The risks posed by climate change and its effect on climate extremes are an increasingly pressing societal problem This book provides an accessible overview of the statistical analysis methods which can be used to investigate climate extremes and analyse potential risk The statistical analysis

methods are illustrated with case studies on extremes in the three major climate variables temperature precipitation and wind speed The book also provides datasets and access to appropriate analysis software allowing the reader to replicate the case study calculations Providing the necessary tools to analyse climate risk this book is invaluable for students and researchers working in the climate sciences as well as risk analysts interested in climate extremes
