

# 15 BASIC STATISTICAL CONCEPTS

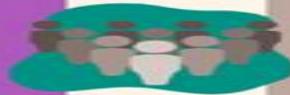

## 1. Descriptive Statistics

These help summarize and describe the main features of a dataset. Common tools include mean, median, mode, range, and standard deviation.

## 3. Population vs. Sample

A population is the full group you're studying, while a sample is a smaller part used for analysis. Studying a sample saves time and resources.

## 5. Data Types

There are four types of data: nominal, ordinal, interval, and ratio. Each type determines how data can be analyzed and interpreted.

## 7. Distributions

A distribution shows how data values are spread out or clustered. The most common is the normal distribution, or bell curve.

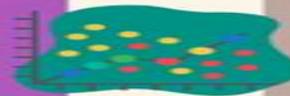

## 9. Confidence Intervals

A confidence interval is a range of values that likely includes the true population value. It reflects both the estimate and the uncertainty around it.

## 11. Regression Analysis

Regression predicts the value of one variable based on another. It also helps us understand how variables are related.

## 13. Central Limit Theorem

This states that the averages of samples tend to follow a normal distribution, even if the original data doesn't. It allows us to make inferences from sample data.

## 15. ANOVA (Analysis of Variance)

ANOVA compares the means of three or more groups to see if they are significantly different. It's useful when testing multiple treatments or categories.

## 2. Inferential Statistics

Used to make predictions or generalizations about a population based on a sample. It helps us draw conclusions without analyzing the entire population.

## 4. Types of Variables

Variables are characteristics measured in a study— independent variables cause change, and dependent variables show effects. They can be qualitative or quantitative, discrete or continuous.

## 6. Probability

Probability measures how likely an event is to happen, ranging from 0 (impossible) to 1 (certain). It helps us quantify uncertainty.

## 8. Hypothesis Testing

This is a method for testing assumptions about a population. You compare a null hypothesis (no effect) with an alternative hypothesis (some effect).

## 10. Correlation

Correlation shows the strength and direction of a relationship between two variables. A positive value means they move together, a negative one means they move oppositely.

## 12. Statistical Significance

Statistical significance means a result is likely not due to chance. It's often determined using a p-value threshold like 0.05.

## 14. Sampling Methods

Different ways to choose a sample include random, stratified, and convenience sampling. A good sampling method ensures better accuracy and less bias.

**Teaching Statistical Concepts** Anne Hawkins, Flavia Jolliffe, Leslie Glickman, 2014-09-19 There is growing recognition that statistics should be part of the core curriculum for the compulsory schooling of all children leading to a now urgent need for teachers to be trained in both statistical content and appropriate teaching methods This book lays the foundation for

teacher's responses to these changes exploring how best to teach those applied skills which are now seen to be a more relevant part of the content of statistical courses

**An Introduction to Statistical Concepts** Richard G Lomax, Debbie L. Hahs-Vaughn, 2013-06-19 This comprehensive flexible text is used in both one and two semester courses to review introductory through intermediate statistics. Instructors select the topics that are most appropriate for their course. Its conceptual approach helps students more easily understand the concepts and interpret SPSS and research results. Key concepts are simply stated and occasionally reintroduced and related to one another for reinforcement. Numerous examples demonstrate their relevance. This edition features more explanation to increase understanding of the concepts. Only crucial equations are included. In addition to updating throughout the new edition features New co author Debbie L Hahs Vaughn the 2007 recipient of the University of Central Florida's College of Education Excellence in Graduate Teaching Award. A new chapter on logistic regression models for today's more complex methodologies. More on computing confidence intervals and conducting power analyses using G Power. Many more SPSS screenshots to assist with understanding how to navigate SPSS and annotated SPSS output to assist in the interpretation of results. Extended sections on how to write up statistical results in APA format. New learning tools including chapter opening vignettes outlines and a list of key concepts many more examples tables and figures boxes and chapter summaries. More tables of assumptions and the effects of their violation including how to test them in SPSS. 33% new conceptual computational and all new interpretative problems. A website that features PowerPoint slides answers to the even numbered problems and test items for instructors and for students the chapter outlines key concepts and datasets that can be used in SPSS and other packages and more. Each chapter begins with an outline a list of key concepts and a vignette related to those concepts. Realistic examples from education and the behavioral sciences illustrate those concepts. Each example examines the procedures and assumptions and provides instructions for how to run SPSS including annotated output and tips to develop an APA style write up. Useful tables of assumptions and the effects of their violation are included along with how to test assumptions in SPSS. Stop and Think boxes provide helpful tips for better understanding the concepts. Each chapter includes computational conceptual and interpretive problems. The data sets used in the examples and problems are provided on the web. Answers to the odd numbered problems are given in the book. The first five chapters review descriptive statistics including ways of representing data graphically statistical measures the normal distribution and probability and sampling. The remainder of the text covers inferential statistics involving means proportions variances and correlations basic and advanced analysis of variance and regression models. Topics not dealt with in other texts such as robust methods multiple comparison and nonparametric procedures and advanced ANOVA and multiple and logistic regression models are also reviewed. Intended for one or two semester courses in statistics taught in education and or the behavioral sciences at the graduate and or advanced undergraduate level. Knowledge of statistics is not a prerequisite. A rudimentary knowledge of algebra is required.
