Statistical Models and Causal Inference David A. Freedman, 2009-11-23 David A. Freedman presents here a definitive synthesis of his approach to causal inference in the social sciences He explores the foundations and limitations of statistical modeling illustrating basic arguments with examples from political science public policy law and epidemiology Freedman maintains that many new technical approaches to statistical modeling constitute not progress but regress Instead he advocates a shoe leather methodology which exploits natural variation to mitigate confounding and relies on intimate knowledge of the subject matter to develop meticulous research designs and eliminate rival explanations When Freedman first enunciated this position he was met with scepticism in part because it was hard to believe that a mathematical statistician of his stature would favor low tech approaches But the tide is turning Many social scientists now agree that statistical technique cannot substitute for good research design and subject matter knowledge This book offers an integrated presentation of Freedman's views

Statistical Models in Engineering Gerald J. Hahn, Samuel S. Shapiro, 1967 A detailed treatment on the use of statistical models representing physical phenomena Considers the relevance of the popular normal distribution models and the applicability of exponential distribution in reliability problems Introduces and discusses the use of alternate models such as gamma beta and Weibull distributions Features expansive coverage of system performance and describes an exact method known as the transformation of variables Deals with techniques on assessing the adequacy of a chosen model including both graphical and analytical procedures Contains scores of illustrative examples most of which have been adapted from actual problems
