Topics in Nonlinear Dynamics with Computer Algebra R.H. Rand, 1994-04-14 First published in 1994 Routledge is an imprint of Taylor Francis an informa company [Computer Algebra Methods for Equivariant Dynamical Systems](#) Karin Gatermann, 2007-05-06 This book starts with an overview of the research of Gröbner bases which have many applications in various areas of mathematics since they are a general tool for the investigation of polynomial systems The next chapter describes algorithms in invariant theory including many examples and time tables These techniques are applied in the chapters on symmetric bifurcation theory and equivariant dynamics This combination of different areas of mathematics will be interesting to researchers in computational algebra and or dynamics [Computer Algebra Handbook](#) Johannes Grabmeier, Erich Kaltofen, Volker Weispfenning, 2012-12-06 Two ideas lie gleaming on the jeweler s velvet The first is the calculus the second the algorithm The calculus and the rich body of mathematical analysis to which it gave rise made modern science possible but it has been the algorithm that has made possible the modern world David Berlinski *The Advent of the Algorithm* First there was the concept of integers then there were symbols for integers I II III 1111 fttt what might be called a sticks and stones representation I II III IV V Roman numerals 1 2 3 4 5 Arabic numerals etc Then there were other concepts with symbols for them and algorithms sometimes for manipulating the new symbols Then came collections of mathematical knowledge tables of mathematical computations theorems of general results Soon after algorithms came devices that provided assistance for carrying out computations Then mathematical knowledge was organized and structured into several related concepts and symbols logic algebra analysis topology algebraic geometry number theory combinatorics etc This organization and abstraction lead to new algorithms and new fields like universal algebra But always our symbol systems reflected and influenced our thinking our concepts and our algorithms **Algorithms for Computer Algebra** Keith O. Geddes, Stephen R. Czapor, George Labahn, 2007-06-30 *Algorithms for Computer Algebra* is the first comprehensive textbook to be published on the topic of computational symbolic mathematics The book first develops the foundational material from modern algebra that is required for subsequent topics It then presents a thorough development of modern computational algorithms for such problems as multivariate polynomial arithmetic and greatest common divisor calculations factorization of multivariate polynomials symbolic solution of linear and polynomial systems of equations and analytic integration of elementary functions Numerous examples are integrated into the text as an aid to understanding the mathematical development The algorithms developed for each topic are presented in a Pascal like computer language An extensive set of exercises is presented at the end of each chapter *Algorithms for Computer Algebra* is suitable for use as a textbook for a course on algebraic algorithms at the third year fourth year or graduate level Although the mathematical development uses concepts from modern algebra the book is self contained in the sense that a one term undergraduate course introducing students to rings and fields is the only prerequisite assumed The book also serves well as a

supplementary textbook for a traditional modern algebra course by presenting concrete applications to motivate the understanding of the theory of rings and fields *Topics Nonlinear Dynamics Appl* Richard H. Rand,1994-04-14

Nonlinear Dynamics Nail N. Akhmediev,Rowena Ball,2003 This book is an inspirational introduction to modern research directions and scholarship in nonlinear dynamics and will also be a valuable reference for researchers in the field With the scholarly level aimed at the beginning graduate student the book will have broad appeal to those with an undergraduate background in mathematical or physical sciences In addition to pedagogical and new material each chapter reviews the current state of the area and discusses classic and open problems in engaging surprisingly non technical ways The contributors are Brian Davies bifurcations in maps Nalini Joshi integrable systems and asymptotics Alan Newell wave turbulence and pattern formation Mark Ablowitz nonlinear waves Carl Weiss spatial solitons Cathy Holmes Hamiltonian systems Tony Roberts dissipative fluid mechanics Jorgen Frederiksen two dimensional turbulence and Mike Lieberman Fermi acceleration **Journal of the Mathematical Society of Japan** Nihon Sūgakkai,1994 [The Nonlinear Dynamics of Towed Array Lifting Devices](#) Deepak Venkat Ramani,2001 [Delay-differential Models of Cutting Tool Dynamics with Nonlinear and Mode-coupling Effects](#) Tamás Kalmár-Nagy,2002 *Applied Mechanics Reviews* ,1985 **The Dynamics of Two Coupled Van Der Pol Oscillators with Delay Coupling** Stephen Allen Wirkus,1999 **Mathematical System Theory** Athanasios C. Antoulas,2013-04-17 Over the past three decades R E Kalman has been one of the most influential personalities in system and control theory His ideas have been instrumental in a variety of areas This is a Festschrift honoring his 60th birthday It contains contributions from leading researchers in the field giving an account of the profound influence of his ideas in a number of areas of active research in system and control theory For example since their introduction by Kalman in the early 60 s the concepts of controllability and observability of dynamical systems with inputs have been the corner stone of the great majority of investigations in the field *SIAM Journal on Control and Optimization* Society for Industrial and Applied Mathematics,2000 **The Stability of Parametrically Excited Systems** Geoffrey David Recktenwald,2006 **Three Problems in Parametric Excitation** Leslie Ho-Ming Ng,2002 **Resonance Capture in Dynamical Systems** Donald Dane Quinn,1995 *American Journal of Physics* ,2000 **Mathematics Today** ,1996 **Mathematical Reviews** ,2004 **Subject Guide to Books in Print** ,1997
