Scalable Parallel Programming Applied to H.264/AVC Decoding Ben Juurlink,Mauricio Alvarez-Mesa,Chi Ching Chi,Arnaldo Azevedo,Cor Meenderinck,Alex Ramirez,2012-06-01 Existing software applications should be redesigned if programmers want to benefit from the performance offered by multi and many core architectures Performance scalability now depends on the possibility of finding and exploiting enough Thread Level Parallelism TLP in applications for using the increasing numbers of cores on a chip Video decoding is an example of an application domain with increasing computational requirements every new generation This is due on the one hand to the trend towards high quality video systems high definition and frame rate 3D displays etc that results in a continuous increase in the amount of data that has to be processed in real time On the other hand there is the requirement to maintain high compression efficiency which is only possible with video codes like H 264 AVC that use advanced coding techniques In this book the parallelization of H 264 AVC decoding is presented as a case study of parallel programming H 264 AVC decoding is an example of a complex application with many levels of dependencies different kernels and irregular data structures The book presents a detailed methodology for parallelization of this type of applications It begins with a description of the algorithm an analysis of the data dependencies and an evaluation of the different parallelization strategies Then the design and implementation of a novel parallelization approach is presented that is scalable to many core architectures Experimental results on different parallel architectures are discussed in detail Finally an outlook is given on parallelization opportunities in the upcoming HEVC standard Mobile Satellite Communication Networks Ray E.
