## **View From Mount Improbable:**

**The View from Mount Improbable** Richard Dawkins, 2005 In May 2005 Penguin will publish 70 unique titles to celebrate the company's 70th birthday. The titles in the Pocket Penguins series are emblematic of the renowned breadth of quality of the Penguin list and will hark back to Penguin founder Allen Lane's vision of good books for all. In this extract from *Climbing Mount Improbable* Richard Dawkins, bestselling author of *The Blind Watchmaker*, gives an introduction to evolutionary biology and unravels the mysteries of the highest peak of all the eye. *The Order of Things* Alister E. McGrath, 2008-04-15 Provocative and immensely well informed. *The Order of Things* represents a substantial and original contribution to the fields of systematic theology, historical theology, and the science and religion dialogue. Leading theologian Alister E. McGrath explores how the working methods and assumptions of the natural sciences can be used to inform and stimulate systematic theology. Written by one of today's best known Christian writers. Explores how the working methods and assumptions of the natural sciences can be used to inform and stimulate systematic theology. Continues McGrath's acclaimed exploration of scientific theology begun with his groundbreaking three-volume work *A Scientific Theology*. Includes a landmark extended analysis of whether doctrinal development can be explained using Darwinian evolutionary models and exploration of how the transition from a scientific theology to a future scientific dogmatics might be made. Supported by a published review of McGrath's scientific theology project which is currently the best brief introduction to his thought. *No Free Lunch* William A. Dembski, 2007-02 Darwin's greatest accomplishment was to show how life might be explained as the result of natural selection. But does Darwin's theory mean that life was unintended? William A. Dembski argues that it does not. In this book Dembski extends his theory of intelligent design. Building on his earlier work in *The Design Inference* (Cambridge, 1998) he defends that life must be the product of intelligent design. Critics of Dembski's work have argued that evolutionary algorithms show that life can be explained apart from intelligence. But by employing powerful recent results from the *No Free Lunch* Theory, Dembski addresses and decisively refutes such claims. As the leading proponent of intelligent design, Dembski reveals a designer capable of originating the complexity and specificity found throughout the cosmos. Scientists and theologians alike will find this book of interest as it brings the question of creation firmly into the realm of scientific debate.

**Macroevolution** Emanuele Serrelli, Nathalie Gontier, 2015-02-13 This book is divided in two parts, the first of which shows how beyond paleontology and systematics macroevolutionary theories apply key insights from ecology and biogeography, developmental biology, biophysics, molecular phylogenetics, and even the sociocultural sciences to explain evolution in deep time. In the second part, the phenomenon of macroevolution is examined with the help of real-life history case studies on the evolution of eukaryotic sex, the formation of anatomical form and body plans, extinction and speciation events of marine invertebrates, hominin evolution, and species conservation ethics. The book brings together leading experts who explain pivotal concepts such as Punctuated Equilibria, Stasis, Developmental Constraints, Adaptive Radiations, Habitat

Tracking Turnovers Mass Extinctions Species Sorting Major Transitions Trends and Hierarchies key premises that allow macroevolutionary epistemic frameworks to transcend microevolutionary theories that focus on genetic variation selection migration and fitness Along the way the contributing authors review ongoing debates and current scientific challenges detail new and fascinating scientific tools and techniques that allow us to cross the classic borders between disciplines demonstrate how their theories make it possible to extend the Modern Synthesis present guidelines on how the macroevolutionary field could be further developed and provide a rich view of just how it was that life evolved across time and space In short this book is a must read for active scholars and because the technical aspects are fully explained it is also accessible for non specialists Understanding evolution requires a solid grasp of above population phenomena Species are real biological individuals and abiotic factors impact the future course of evolution Beyond observation when the explanation of macroevolution is the goal we need both evidence and theory that enable us to explain and interpret how life evolves at the grand scale

**Answering the New Atheism** Scott Hahn, Benjamin Wiker, 2008 The essential book for dismantling Richard Dawkins atheistic agenda Scott Hahn and Benjamin Wiker collaborate to debunk Dawkins theories and show how inconsistent and illogical his conclusions truly are This is the definitive book for college students or faithful Christians hoping to answer Dawkins claims and assert the logic and beauty of their faith

**Climbing Mount Improbable** Richard Dawkins, 1997 In this book Richard Dawkins urges us to put aside superstitions and wake up to a universe far more wondrous than those in any myths by describing the difference between accident and design in evolution

**An Informed Cosmos** Peter S. Williams, 2023-07-14 After a substantial author's preface recounting the author's life journey with the question of science and design in nature An Informed Cosmos pulls together essays that jointly cover the core arguments for a scientific theory of intelligent design Along with a foreword by philosopher of science and leading design theorist Stephen C Meyer and a wide range of recommended resources An Informed Cosmos offers an informed overview of the contemporary case for intelligent design

**The Aristocratic Adventurer** David Cannadine, 2005 In May 2005 Penguin will publish 70 unique titles to celebrate the company's 70th birthday The titles in the Pocket Penguins series are emblematic

of the renowned breadth of quality of the Penguin list and will hark back to Penguin founder Allen Lane's vision of good books for all broadcasters whose books such as *Hope and Glory* and *Ornamentalism* have brought erudite and entertaining social history to a wide audience. As General Editor of the Penguin History of Britain series, he embodies Penguin's long-term commitment to quality accessible history publishing. This piece from his acclaimed *Aspects of Aristocracy* takes a wry look at Winston Churchill's upper class origins.

**Encyclopedia of Evolution** Stanley A. Rice, 2009 Evolutionary science is not only one of the greatest breakthroughs of modern science but also one of the most controversial. Perhaps more than any other scientific area, evolutionary science has caused us all to question what we are, where we came from, and how we relate to the rest of the universe. *Encyclopedia of Evolution* contains more than 200 entries that span modern evolutionary science and the history of its development. This comprehensive volume clarifies many common misconceptions about evolution. For example, many people have grown up being told that the fossil record does not demonstrate an evolutionary pattern and that there are many missing links. In fact, most of these missing links have been found, and their modern representatives are often still alive today. The biographical entries represent evolutionary scientists within the United States who have had and continue to have a major impact on the broad outline of evolutionary science. The biographies chosen reflect the viewpoints of scientists working within the United States. Five essays that explore interesting questions resulting from studies in evolutionary science are included, as well. The appendix consists of a summary of Charles Darwin's *Origin of Species*, which is widely considered to be the foundational work of evolutionary science and one of the most important books in human history. The five essays include: How much do genes control human behavior? What are the ghosts of evolution? Can an evolutionary scientist be religious? Why do humans die? Are humans alone in the universe?

**Anatomy Trains E-Book** Thomas W. Myers, 2013-12-06 The latest edition of this highly successful volume presents a unique understanding of the role of fascia in healthy movement and postural distortion, which is of vital importance to bodyworkers and movement therapists worldwide. Fully updated with the latest scientific research, the book presents a unique whole systems view of myofascial locomotor anatomy in which the body-wide connections among the muscles within the fascial net are described in detail. Using the metaphor of railway or train lines, the book explains how patterns of strain communicate through the myofascial webbing, contributing to movement stability and postural compensation. Written in the clear and accessible style that characterised the success of previous editions, the book guides the reader in the effective application of the Anatomy Trains theory via the use of abundant diagrams, photographs, and educational film sequences on an associated website: [www.myersmyofascialmeridians.com](http://www.myersmyofascialmeridians.com)
