Transaction Level Modelling Methodology:

Verification Methodology Manual for SystemVerilog Janick Bergeron, Eduard Cerny, Alan Hunter, Andy Nightingale, 2005-09-28 Offers users the first resource guide that combines both the methodology and basics of SystemVerilog Addresses how all these pieces fit together and how they should be used to verify complex chips rapidly and thoroughly Unique in its broad coverage of SystemVerilog advanced functional verification and the combination of the two

Open Verification Methodology Cookbook Mark Glasser, 2009-07-24 Functional verification is an art as much as a science It requires not only creativity and cunning but also a clear methodology to approach the problem The Open Verification Methodology OVM is a leading edge methodology for verifying designs at multiple levels of abstraction It brings together ideas from electrical systems and software engineering to provide a complete methodology for verifying large scale System on Chip SoC designs OVM defines an approach for developing testbench architectures so they are modular configurable and reusable This book is designed to help both novice and experienced verification engineers master the OVM through extensive examples It describes basic verification principles and explains the essentials of transaction level modeling TLM It leads readers from a simple connection of a producer and a consumer through complete self checking testbenches It explains construction techniques for building configurable reusable testbench components and how to use TLM to communicate between them Elements such as agents and sequences are explained in detail

Reuse Methodology Manual for System-on-a-Chip Designs Michael Keating, Pierre Bricaud, 2002 Reuse Methodology Manual for System on a Chip Designs Third Edition outlines a set of best practices for creating reusable designs for use in an SoC design methodology These practices are based on the authors experience in developing reusable designs as well as the experience of design teams in many companies around the world Silicon and tool technologies move so quickly that many of the details of design for reuse will undoubtedly continue to evolve over time But the fundamental aspects of the methodology described in this book have become widely adopted and are likely to form the foundation of chip design for some time to come Development methodology necessarily differs between system designers and processor designers as well as between DSP developers and chipset developers However there is a common set of problems facing everyone who is designing complex chips In response to these problems design teams have adopted a block based design approach that emphasizes design reuse Reusing macros sometimes called cores that have already been designed and verified helps to address all of the problems above However in adopting reuse based design design teams have run into a significant problem Reusing blocks that have not been explicitly designed for reuse has often provided little or no benefit to the team The effort to integrate a pre existing block into new designs can become prohibitively high if the block does not provide the right views the right documentation and the right functionality From this experience design teams have realized that reuse based design requires an explicit methodology for developing reusable macros that are easy to integrate into SoC designs This manual focuses on describing

these techniques Features of the Third Edition Up to date State of the art Reuse as a solution for circuit designers A chronicle of best practices All chapters updated and revised Generic guidelines non tool specific Emphasis on hard IP and physical design

Advances in Design and Specification Languages for Embedded Systems Sorin Alexander Huss,2007-07-19 Design and specification languages are of utmost interest in the area of embedded systems and the Forum on Specification and Design Languages has been once again the main European event for the embedded systems and chip design community Advances in Design and Specification Languages for Embedded Systems is the latest contribution to the Chip Design Languages series and it consists of selected papers presented at the Forum on Specifications and Design Languages FDL 06 in September 2006 FDL an ECSI conference is the premier European forum to present research results exchange experiences and learn about new trends in the application of specification and design languages as well as of associated design and modelling methods and tools for integrated circuits embedded systems and heterogeneous systems Modelling and specification concepts push the development of new methodologies for design and verification to system level they thus provide the means for a model driven design of complex information processing systems in a variety of application domains

Computer Performance Evaluation Gianfranco Balbo, Giuseppe Serazzi, 1992 This International Conference is an event now recognized as an important forum for the presentation of state of the art results concerning the application of modelling techniques for computer performance evaluation both in terms of case studies and of implementations providing convenient modelling environments for system evaluation mainly during their early design stages The papers included address current problems with special emphasis on communication distributed and parallel systems The techniques used for workload characterization performance analysis and case studies reflect the need to rely on state of the art methods to account for the special requirements and features of these systems The description of tools that are under development for the analysis of communication networks and distributed and parallel systems represent an interesting survey of the techniques that are actually being implemented for the study of these systems *Modelling Techniques and Tools for Performance Analysis*, 1986 *Modelling Techniques and Tools for Performance Analysis* D. Potier, 1985 Hardbound This proceedings volume contains the thirty five invited and selected papers presented at the International Conference on Modelling Techniques and Tools for Performance Analysis The conference had two main objectives to promote the most recent advances in the field of modelling techniques and tools and to present a spectrum of new specialized products that are now reaching industrial and technical maturity The technical content of the proceedings is specifically oriented towards practice and experience with techniques and tools **Tutorial on Software Design Techniques** Peter Freeman, Anthony I.
